Environmental risk management at plants

Managing Soil Contamination and VOC Risks

TDK has established environmental risk assessment standards and management methods for soil contamination and VOCs, * and each site regularly conducts risk assessment. At high risk locations, a clearly defined priority sequence of preventive measures, restoration measures etc. ensures effective management of environmental risks.

- * VOC: Volatile Organic Compounds

PCB Storage and Management for Proper Disposal

TDK has 21 electric power capacitors stored/managed/registered in compliance with the Waste Management and Public Cleansing Act. *

- * Japanese law governing the disposal and cleanup of waste

Pollution Prevention Regulatory Compliance and Accidents

To prevent the contamination of atmosphere, water, soil, etc., TDK strictly complies with all relevant laws and regulations. For certain items, we have even set voluntary standards that are more stringent than the legal requirements, and we take preventive action whenever necessary to reduce the environmental load.

In fiscal 2016 there were no statutory level excesses or accidents.

Prevention and control of exposure to toxic substances with products as the source
