GRI REPORTING TABLE: INTRODUCTION

- ▶ MOL Group has over the years been applying the GRI standards as the main reporting framework for its non-financial (sustainability) reporting.
- ▶ The use of the GRI Standards was based on the strategy of aiming for global best practices for reporting publicly on a wide range of economic, environmental and social impacts
- ▶ The GRI standards provide MOL group with the possibility of presenting non-financial disclosure to a wide stakeholder group
- ▶ In 2017, MOL group switched to the new GRI standards from the previous G4 standards.
- ▶ In 2018, MOL Group re-design its sustainability reporting framework, including the GRI Standards
- ▶ As a result, MOL Group created a new, highly transparent "GRI Reporting Table" where all 162 indicators, including the GRI sector supplement for 'Oil & Gas sector disclosures' guidelines, are presented separately
- ▶ Each page contains a number of features providing full transparency and comparability, allowing investors, analysts and a wider stakeholder base to assess each indicator separately.
- ▶ Each GRI indicator is cross-referenced to other non-financial (sustainability) reporting frameworks where applicable, whilst supporting data/links are provided.
- ▶ The GRI Reporting Table together with the Sustainability Report and the Data Library form MOL Group's sustainability reporting:
- ▶ Annual Report and Data Library: <https://molgroup.info/en/investor-relations/publications#nav-annual-reports>
- ▶ The "GRI Reporting Table" is updated annually and published alongside the Annual Report and Data Library on the day of the Annual Shareholders Meeting.
- ▶ **IMPORTANT:** For additions to the GRI Reporting Table after April 11 (first publication), refer to slide 176.

ANNUAL REPORT PAGE

N/A

Through the *GRI Reporting Table*, MOL Group presents all 162 indicators separately, including the GRI sector supplement for 'Oil & Gas Sector Disclosures' guidelines. All 158 indicators are cross-referenced, where possible, to the Sustainability Accounting Standards Board (SASB), the UN Sustainable Development Goals (SDG), and the Task Force on Climate-related Financial Disclosure (TCFD).

Cross-references to SASB include the *Sustainability Accounting Metric Codes* from SASB's Materiality Map from primarily three different SASB industry categories given the integrated nature of MOL Group (1-3 below), whilst also incorporating to a lesser extent other industry categories where relevant (4-5 below):

1. Oil & Gas - Exploration & Production
2. Oil & Gas - Refining & Marketing
3. Chemicals
4. Multiline and Specialty Retailers & Distributors
5. Advertising and Marketing

For the 2019 GRI Reporting Table, MOL introduces new Metric Codes from SASB's Materiality Map from two new industry categories following the release of new information: *a) Metals & Mining* driven by investor request for information regarding the Group's exposure to tailings waste, as well as *b) Road Transportation* due the increasing disclosure around road safety given the considerable size of the Group's logistics division (truck and rail), as well as involuntary vs voluntary turnover rates (although the disclosure for the turnover rates applies to the whole Group. Disclosure broken down by division, including logistics, is under consideration).

GRI REPORTING TABLE: NEW DISCLOSURES

- MOL Group regularly reviews its disclosure practices versus a range of non-financial reporting frameworks, ESG rating agencies, index houses and data providers. The list below contains new disclosures that were added to the SD Report, the 2019 GRI Reporting Table, and/or the 2015-2019 Data Library:

DISCLOSURE OF NEW INDICATORS
CLIMATE CHANGE AND ENVIRONMENT
Use of coal/lignite as source of energy for Downstream sites
Fresh Water Withdrawal broken down by division
Fresh Water Withdrawal in regions with High or Extremely High Baseline Water Stress
Water Consumption broken down by Division
Water Consumption in regions with High or Extremely High Baseline Water Stress
Air Emissions broken down by Division
Hazardous and Non-Hazardous Waste broken down by division
Exposure to Tailings Dam Waste
Spills impacting shorelines with ESI rankings 8-10
HEALTH AND SAFETY
Road Accident Rate broken down by division
Fatal Accident Rate (including broken down by a) division and b) own-staff/contractor)
Total Recordable Injury Rate (TRIR) broken down a) division and b) own-staff/contractor
HAZMAT Transportation Road Accident Rate
Non-HAZMAT Transportation Road Accident Rate
TIER 1 and TIER 2 Process Safety Events broken down by Downstream Production, Logistics and Consumer Services
TIER 1 and TIER 2 Process Safety Events Rates, incl. broken down by division
TIER 3 events for the Group and broken down by divisions
PEOPLE AND COMMUNITIES
Number of refineries in or near areas of dense population
Turnover Rate broken down into voluntary vs non-voluntary for the Group
INTEGRITY AND TRANSPARENCY
Ongoing (external) investigations related to anti-competitive practices
Fines or settlements related to anti-competitive business practices
New GRI Standard on Taxation
Monetary losses as a result of legal proceedings associated with price fixing or price manipulation

MOL Group is committed to implement the principle of „product stewardship“ on the highest level in its procurement processes through the quality and parameters of the purchased products and services. Consequently, the purchased products should satisfy the strictest quality criteria.

Suppliers Relationship Management (SRM): MOL Group has implemented the SRM framework as well as Procurement Category Management aiming at further developing cooperation with suppliers and facilitating MOL Group efforts related to sustainable development, including the preparation of a standard criteria system for activities with risk exposure. MOL Group wishes to ensure trouble-free cooperation and to filter out incompetent suppliers prior to the selection process, holding preliminary control of the relevant compliance criteria. Development of the HSE criteria system and ensuring compliance with such criteria in MOL for suppliers offering services for HSE-critical operations (pre-contracting competence analysis, and on-site audit held during the delivery of supplier's services). Development of supplier evaluation system, including HSE criteria supporting the successful development of suppliers performance in HSE-related matters. Annual Suppliers Forum for our potential suppliers, where two-way communication will be secured, in addition to presenting MOL expectations.

Responsible Supply Chain: MOL Group enters into relationships and conduct business with thousands of suppliers from more than 40 countries given the size and international presence of the Group. MOL Group is committed to build and maintain a responsible and sustainable supply chain. Hence why interactions with suppliers are based on compliance with all relevant laws and regulations and the highest ethical standards. MOL Group supports suppliers to comply with them, and also set requirement to behave in a responsible and sustainable manner. MOL Group places particularly emphasis on avoiding and prohibiting corrupt practices in all circumstances, whether in dealings with representatives of either the public or private sector. Furthermore, MOL Group emphasizes the respect of human rights and condemns human rights abuses in any form. We expect suppliers to comply with relevant health, safety and environmental laws, legal and MOL Group regulations, and norms of fair competition.

Detailed information about MOL Group's process for evaluating the highest governance body's performance with respect to governance of economic, environmental, and social topics, whether such evaluation is independent or not, and its frequency, whether such evaluation is a self-assessment about the actions taken in response to evaluation of the highest governance body's performance with respect to governance of economic, environmental, and social topics, including, as a minimum, changes in membership and organizational practice can be found on our website as well as in the Annual Report under the corporate governance section. Under the Corporate Governance Declaration, the Board of Directors prepares a formal evaluation of its own and its committees' performance on a yearly basis and it continuously reviews its own activity.

As operators in a high risk industry MOL Group is committed to professionally manage and maintain our risks within acceptable limits as per best industry practice.

The aim of MOL Group Risk Management is to keep the risks of our business within acceptable levels and support the resilience of our operations as well as the sustainability of the company. For this purpose, as an integral part of our corporate governance structure, we have developed a comprehensive Enterprise Risk Management (ERM) system which focuses on the organisation's value creation process, meaning factors critical to the success and threats related to the achievement of objectives but also occurrence of risk events causing potential impact to people, assets, environment or reputation.

Regular risk reporting to top management provides oversight on top risks and assurance that updated responses, controls, and appropriate mitigation actions are set and followed. Effectiveness of the risk management system is considered by the Management Committee, the Chief Executives Committee, the Board of Directors, Supervisory Board and its respective Committees.

Additional information can be obtained through the website, as well as through the yearly risk update inside the Integrated Annual Report.

MOL Group provides a range of information regarding remuneration policies for the highest governance bodies: the Supervisory Board (SB), the Board of Directors (BoD) and Senior Executives. For the SB, MOL Group discloses monthly fee amounts and other benefits. For the BoD, MOL Group discloses a range of policies/data, including fixed yearly remuneration, share allowances, cash allowances and other benefits. For senior executives, MOL Group discloses a range of policies/data, including percentage mix between base salary, short and long-term incentives, performance-based and equity-based pay, as well as performance criteria objectives, including economic, environmental and social topics.

The Hungarian Parliament passed the Act LXVII of 2019 on Encouraging Long-Term Shareholder Engagement and amendments of further regulations for harmonization purposes on 2 July, 2019. The regulation implemented 3a-3c of 'Chapter Ia' of Directive (EU) 2017/828 of the European Parliament and of the Council of 17 May 2017 amending Directive 2007/36/EC as regards the encouragement of long-term shareholder engagement. MOL Plc. in order to comply with the regulation, submits to General Meeting for consultative vote the Company's Remuneration Policy of its Board of Directors, Supervisory Board and Executive Employees in 2020. The Remuneration Policy will take effect from 1st January 2021.

MOL Group provides yearly updates on changes to remuneration. More information can be obtained in the Corporate Governance Section of the Integrated Annual Report (section 5.1 Board of Directors, section 5.2 Executive Board and Management, and section 5.3 Supervisory Board) and on the MOL Group website via the links below:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

<https://molgroup.info/en/about-mol-group/corporate-governance>

MAIN CG DOCUMENTS: OTHER DOCUMENTS (REMUNERATION PAID)

<https://molgroup.info/en/about-mol-group/corporate-governance>

PARTIAL REPORTING EXPLANATION:

MOL Group does not disclose the following elements as prescribed by the GRI Standards: fixed pay amounts for senior executives, bonus amounts, sign-on bonuses, recruitment incentive payments, termination payments, claw-backs, retirement benefits, including the difference between benefit schemes and contribution rates for the highest governance body, senior executives, and employees.

The mandate of the Corporate Governance and Remuneration Committee of the Board of Directors is to review corporate processes, procedures, organisational arrangements, compensation schemes (incl. approving the principles of remuneration), and to make proposals on implementing the best practice; including the list of decision-making and authorities, incentive scheme, well-balanced scheme of performance criteria/requirements, and to elaborate a scheme for development of the top management. More information can be obtained from the CG documents on the website. MOL Group's main remuneration principles are: fairness, transparency and competitiveness. Job systematization and external salary benchmarking provided by external consultant supports the Group in ensuring this. The external consultant providing external salary benchmarks is independent of management, and provides other HR related consulting services.

Given MOL Group's Commitment to fair employment, the right to exercise freedom of association and collective bargaining is considered crucial by MOL Group. As Hungary has signed the UN Universal Declaration (UNDP) of Human Rights, the ILO Tripartite Declaration of Principles concerning Multinational Enterprises and Social Policy and the OECD Guidelines for Multinational Enterprises, MOL Group considers these codes of conduct to be compulsory guidelines. MOL Group is committed to supporting the ten key principles of the UNDP Global Compact with respect to human rights, labor rights, protection of the environment and fighting corruption. These values have therefore been integrated into our strategy, culture and everyday operations; moreover, MOL Group tries to promote them within its sphere of influence. MOL Group Code of Ethics and Business Conduct is harmonized with the declarations of the above-mentioned agreements, and all MOL Group companies are required to comply with the Code. The Right to Form and Join a Trade Union and the Right to collective Bargaining is in enshrined in the MOL Group Code of Ethics and Business Conduct under section IV.2. Human Rights and section IV.2.5. and Fair Labour Practices:

https://molgroup.info/storage/documents/sustainability/mol_group_code_of_ethics.pdf

MOL Group is committed to high level social dialogue and MOL Group management is a partner of trade unions and works councils active at members companies employing the majority of the Group's employees. At Group level all employees are represented by the European Works Council (EWC). The EWC ensures the representation of employees at the highest level, exercises its consultation and information rights stipulated by the EWC Directive 2009/38/EC, keeps them informed on an ongoing basis about decisions taken in different countries which are within its competence and about international practices and experiences. More information on the Percentage of total employees covered by collective bargaining agreements can be obtained from the Data Library, while supporting explanations can be obtained from the Annual Report.

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

One member of the MOL Group Supervisory Board (elected in April 2018, and delegated by the employees), has since 2013 been a member of MOL Plc. European Works Council:

MOL Group defines its stakeholders as being groups who affect and/or could be affected by the Group's operations. Being a large multinational company, the majority of engagement processes occur at a local-level. Stakeholders to engage with are selected according to specific local needs and circumstances. MOL Group usually interacts with its stakeholders both proactively or when the stakeholders need information from MOL Group. The group does not exclude any specific stakeholders or stakeholder groups from its engagement activities based on any predefined criteria. One special form of stakeholder engagement is the engagement with policy makers which usually happens in an institutionalized manner through industry associations. Information about identifying and selecting MOL Group stakeholders can be obtained through the Group website:

TCFD

When developing a corporate sustainability program and reporting framework it is critical to properly choose the topics to focus on. MOL Group conducts a Materiality Assessment to identify the most important sustainability impacts of its operations. MOL Group conducts a materiality assessments to rank and classify relevant topics of the oil and gas industry according to how important they are to external and internal stakeholders of the Company, considering both financial and non-financial relevance. The procedure for the materiality assessment does not aim to exclude any of the relevant topics from the sustainability reporting of MOL Group. The assessment is designed to ensure that the most material topics are described with more details, providing the readers with a deeper insight into the sustainability performance. The result of the assessment are summarized in a materiality matrix which is included in the Management Discussion & Analysis chapter of the Annual Report. The list of the material topics identified in the process for defining report content can be obtained from the annual report :

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

Relevant topics are defined in external frameworks such as GRI Standard guidelines and recommendations made by Oil & Gas industry's professional association (IPIECA). **Internal factors** include potential financial impacts and the existence of internal objectives. The key input is the MOL Group level risk matrix that is continuously updated and presented to the Board of Directors and the feedback from our employee representatives. **External stakeholder** perception is analyzed through expert roundtables, public forums and using feedback channel (sd@mol.hu). Special attention is given to topics that provide information sought after by capital markets participants, including investors and ESG index, research and rating houses. Additionally, issues related to governmental initiatives connected to sustainable development might also be judged to be relevant. Moreover, according to the materiality assessment, all of the topics that might have a significant impact on stakeholders are treated as material concerns.

Material topics include community relationships; corporate governance; customers; eco-efficiency; energy efficiency and GHG; ethics and transparency; future product portfolio; human resources; occupational health and safety; process safety; crisis management; spills and leakages

MOL Group created this new, highly transparent "GRI Reporting Table", reporting on all 158 indicators separately (including the GRI sector supplement for 'Oil & Gas Sector Disclosures' guidelines). This document represents MOL Group's GRI Content Index. However, in the beginning of this document, a complete GRI Content Index has been created covering for all 158 indicators, providing an overview of whether an indicator is being fully reported, partially reported or omitted. Each indicator in the GRI Content Index has been linked to that specific indicator across the "GRI Reporting Table". The GRI Reporting Table includes: the number of the disclosure, a complete overview where the information can be found, either within this reporting table or in other published materials (annual report, investor presentations etc.) and the reason(s) for omission(s).

GRI CONTENT INDEX: SLIDES 7-10 IN THE GRI REPORTING TABLE

The Annual Report (link below) contains references to the GRI Standards Disclosure number where applicable, and an in-depth explanation on the reasons for creating this reporting table:

When developing a corporate sustainability program and reporting framework it is critical to properly choose the topics to focus on. MOL Group conducts a Materiality Assessment to identify the most important sustainability impacts of its operations. MOL Group conducts a materiality assessments to rank and classify relevant topics of the oil and gas industry according to how important they are to the external and internal stakeholders of the Company, considering both their financial and non-financial relevance. The procedure for the materiality assessment does not aim to exclude any of the relevant topics from the sustainability reporting of MOL Group. The assessment is designed to ensure that the most material topics are described with more details, providing the readers with a deeper insight into the sustainability performance. The result of the assessment is included and explained in the Annual Report and each topic is described in the Sustainability Report inside the Annual Report.

MOL Group generates a significant value providing a return for shareholders. MOL is one of the biggest tax-payers in Hungary, Slovakia and Croatia, and distributes economic value to suppliers, employees, public administration and other stakeholders. Overall, MOL Group continually generates value for stakeholders through a range of means. This includes but is not limited to employee wages and benefits, including wages and salaries, social security and other personnel expenses, pension costs and post-employment benefits, and the expense of share-based payments. Payments to capital investors including dividends to shareholders and interest payments made to providers of loans. Payments to local/national governments consisting corporate taxes (e.g. corporate, income, property), VAT and excise duties, mining royalties, other taxes and contributions. Direct economic value generated and distributed in previous years can be found in annual reports and continually updated investor presentations via the following links:

EM-EP-420a.4

Given the size of MOL Group, its operating locations, the nature of the oil & gas industry, and the gradual transition to a low carbon economy, MOL Group faces a wide range of financial implications (both risks and opportunities). MOL Group provides a wealth of information around the financial implications and other risks and opportunities (financial, regulatory, physical etc) for the organization's activities due to climate change and the transition to a low carbon, circular economy. MOL Group disclosure on the topic includes descriptions and impacts of the risks and/or opportunities associated to climate change (including 2 degree scenario analysis, and the future product portfolio of MOL Group), the financial implications, the methods used to manage these risks or opportunities and the costs of actions taken to manage them. MOL Group does not collect all this information in one single document or presentation, but is fully integrated into mostly capital markets communication materials (investor presentations) and the integrated annual report.

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

<https://molgroup.info/en/investor-relations/publications#nav-investor-presentations>

<https://molgroup.info/en/investor-relations/publications#nav-quarterly-reports>

<https://molgroup.info/en/sustainability/our-commitments>

MOL Group does monitor and does provide regular updates on how climate related events affect the physical infrastructure of the Group's assets and the consequences of such events. Examples of such disclosure can be obtained under the "Water" and "Spills" sections of the 2018 sustainability report (link above). However, MOL Group does not provide an all-encompassing description of the exposure of its asset-base to physical risks related to climate change as suggested by the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). Such a comprehensive disclosure is currently under consideration.

RISKS

The following areas are considered to represent the most significant climate change related risks to MOL Group for the time horizon leading up to 2030: the new, revised framework of the European Emissions Trading System (ETS), more biofuels with a focus on advanced, waste-based fuels, fuel efficiency, alternative fuels infrastructure, electrification and digitalization of transportation, potential energy efficiency obligation on transport sector, increasing consumer demand for sustainable plastics solutions alongside legislative actions on preventing and reducing plastics use and waste. The financial impact of each of these is estimated to range between HUF 2.8 – 31 bn per year.

OPPORTUNITIES

The Clean Energy along with the Driving Clean Mobility Package – a set of EU regulations – may have a significant impact on the long-term demand for fossil fuels and energy. Besides defining obligations, it also opens up new business opportunities in the area of "clean fuel/energy". In the long term, customer preferences may shift towards more environmental friendly products, which will impact the industry. The projected increase in the electrification of transportation and the steady increase of electric vehicles will likewise create new business opportunities for companies that offer continuous, cost-effective and interoperable charging network. Furthermore, the projected increase in European plastic recycling rates driven by European Strategy for Plastics in a Circular Economy will create new business opportunities through greater integration of recycling activities. MOL Group's 2030 Strategy takes into account these scenarios and defines a trajectory for the group which expects to tap into opportunities over the long term.

MOL Group reward schemes have been designed to reinforce a merit-based culture to ensure a continuous increase in performance and results. MOL Group aligns and harmonizes reward across the Group in companies with similar business profiles, by applying tailored remuneration strategies, taking into consideration local benchmarks and the company's market position. MOL Group's reward strategy is built on the international Total Remuneration approach, which includes major compensation elements including the Annual Base Salary, Short- and Long-Term Incentives and Benefits. MOL Group implements strict guidelines to ensure equal employee compensation regardless of gender, age and nationality. Group-level compensation policies are transparent and are published in group and local regulations. Company-level rules are also defined by Collective Agreements of companies.

MOL Group operates with full transparency concerning Ratio of corporate minimum wage to local minimum wage at significant (more than 100 employee) operating locations. The information can be obtained from the Data Library in the following link:

Across MOL Group Upstream International operating companies, MOL Group follows local regulatory requirements and Production Sharing Agreement stipulations (where applicable) to ensure local content and maintain the expat quota – thus the majority of employees at E&P International Operating Companies are local nationals. MOL focuses on developing its local technical and office employees and ensures expat knowledge transfer (through mentoring, tutoring, internal training, etc.). The number of local senior executives and local managers at its International Upstream can be obtained from the Data Library. MOL CEE operations (INA, Slovnaft, and MOL) are typically staffed and managed by local workforce.

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

In the main countries where MOL Group has Upstream and midstream operations, the most significant indirect impact of MOL Group on the economies of these countries is through the energy it supplies. Another area in which the company can have a significant positive impact on the societies of host countries as a result of the group's operations is by improving access to infrastructure and energy. The development of infrastructure and improvements in access to energy can be directly related to the group's operations, or can occur based on contractual or other commitments.

In Pakistan several communities still lack access to clean drinking water. As part of its social investment program in the last years MOL Pakistan has spent more than USD 800 thousand in executing effective water supply schemes in the most deprived districts of Khyber Pakhtunkhwa including Karak, Hangu, Bannu and Kohat. Previous examples of MOL Group's indirect economic impact include the non-voluntary financial support given by MOL Pakistan for the construction of the Khushal Garh bridge, which improves safety and connectivity between the main provinces of Khyber Pakhtunkhwa and Punjab in Pakistan.

Information about the extent of development of significant infrastructure investments and services supported; the current or expected impacts on communities and local economies, including positive and negative impacts where relevant and whether these investments and services are commercial, in-kind, or pro bono engagements can be found on our website, the Data Library, and in previous and current annual reports under the Communities section:

MOL Group discloses the volume and type of estimated proved reserves and production. The information can be obtained in the Annual Report and Data Library. Furthermore, MOL Group provides each quarter Upstream production related figures through its capital markets communication materials. All three can be obtained through the links below:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

The basis of MOL Group reserves and resources process and calculation is the SPE-PRMS. The basis of the SPE-PRMS is the Petroleum Resources Classification Framework.

UNCONVENTIONAL EXPLORATION AND PRODUCTION: Unconventional exploration techniques such as drilling horizontal wells and reservoir fracking have revolutionized the energy industry. MOL Group realizes the sensitivity of the issue and it has defined a set of environmental standards for responsible drilling of the unconventional wells and for performing limited enhanced recovery methods to enhance the production of conventional fields. These requirements encompass stakeholder concerns, water/land-use and protection, well-integrity, the use of chemicals and other risks which are anticipated from specific risk studies. MOL Hungary has successfully undertaken drilling of one unconventional vertical pilot well, while in INA, enhanced recovery on a few pre-existing wells is ongoing. During the entire lifecycle of the activities, all risks are managed.

OIL SANDS: MOL Group is not engaged in the exploration, development or production of oil sands. MOL Group's 1P and 2P reserves do not contain oil sands. No revenues were generated from the sale of oil products (final and intermediate) that are extracted from oil sands. This includes all upstream oil & gas business, and of all fossil fuel operations (upstream and downstream).

MOL Group does not have any LNG liquefaction capacity. MOL Group does not engage in ultra-deep water drilling (below 1,000m) or offshore Arctic drilling.

MOL Group procurement is a functional organization that helps MOL Group to achieve its business objectives. It is managing a comprehensive supplier base worldwide, including international and local suppliers, as well based on the subject and scope of the procurement procedure. During the creation of procurement category strategy and regulated sourcing procedure, suppliers to be involved are predefined together by procurement and business units. MOL Group contracts with local suppliers whenever it is beneficial, which can be a way of establishing a positive relationship with local communities. Local suppliers are promoted since logistics related cost are always taken into consideration during the procurement process in case of services related to MOL Group locations worldwide, local existence of given international suppliers is also considered.

MOL Group processes are compliant with ISO 50001:2011 requirements (energy management system), these are also applied when dealing with procurement of production materials/assets. Total cost of ownership (TCO, cost during the life-cycle) is part of the evaluation framework, where energy effective solutions are promoted. The origin of the given asset/material is also taken in account during the supplier selection procedure. MOL Group is only concluding contracts with suppliers that have been pre-screened from financial, legal and pre-qualified from HSE aspect. MOL Group is committed to be business partner of suppliers with ethical attitude, thus potential suppliers are also subject of ethical pre-screening (i.e. Illicit employment practices, money laundering activities, terrorist financing, bribery, corruption etc. are reasons for disqualifying). Sourcing procedures are managed and controlled via a group-wide used system, which ensures transparency and fair competition of such supplier base. Official communication channels are always set up to enable traceability. Suppliers are also subject to regular post-evaluation, and the results serve a basis to the future cooperation between the parties. MOL group has built up strong strategic relationship in defined procurement areas ensuring the stability and long-term cooperation. More information on MOL Group procurement practices can be obtained through the following link:

During 2019, the total value of contracts signed between MOL Group and locally registered businesses in upstream international countries (Pakistan, Norway and Russia) is EUR 275 mn. The difference compared to Y2018 is caused by the increased contracted value in MOL Norge.

MOL Group discloses the number/ratio of local suppliers in the Data Library and previous annual reports. The information can be obtained via the link below:

MOL Group anti-corruption practices include the following:

- anti-corruption standards are described in our Group Code of Ethics and Business Conduct. (covers all Group operations/companies)
- procedures to be followed in case of assumed fraudulent co-operation, unfair market behaviour are defined in the Procurement Handbook
- the internal fraud risk assessments and fraud related investigations are conducted by Group Security according to the annual fraud risk assessment plan approved by senior management.
- the anti-fraud framework is regulated by the Group Security Area Book published in 2019
- ethics-related e-learning materials dealing, among other things, with anti-corruption issues are mandatory for all the employees having access to the intranet of MOL Group.
- annual managerial presentation is obligatory about the ethical norms for all employees
- all country chairmen – as part of their annual ethics related duties – have to report on the corruption-related risks of the given country they are working in and draw up relevant mitigation plans.
- An ethical reporting system supports the handling of internal and external grievances was created. The MOL Group EC Rules of Procedure is defines the rules applicable to ethical investigation procedures: according to the Business Partner Code of Ethics. MOL Group business partners shall commit themselves to conducting business free of any and all forms of corruption and fraud, including the rejection of propositions or attempts made in favour or on behalf of their employees or organizations and aiming at payment of unfair amounts. We are striving to make the Business Partners Code of Ethics part of every contract. If norms of the MOL Group Business Partners Code of Ethics are permanently and substantially breached, MOL Group will terminate its business cooperation with the business partner concerned.

<https://molgroup.info/en/sustainability/ethics-and-governance>

MOL Group anti-corruption is process driven, irrespective of operations/companies. Following an internal review, possible risk assessments are discussed, and then a number of proposed processes with fraud risk are selected. During 2019, twelve different processes were selected to undergo fraud risk assessments.

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports> .

PARTIAL REPORTING EXPLANATION: MOL Group does not disclose the percentage coverage in term of processes as the number would be irrelevant, nor 205-1-b (List of risks).

The foundation of MOL Group's ethics management system continues to be the Code of Ethics and Business Conduct (CoEBC). The CoEBC (first link below) contains a section titled "Anti-corruption And Anti-fraud" (section IV.4). As of 2018, all Group employees received and signed reception of the CoEBC (i.e. MOL Group's anti-corruption policies and procedures have been communicated to all employees, regardless of employee category or region, including governance body members). In line with internal rules, every new employee hired by MOL Group during 2019 was informed about CoEBC and required to pass compulsory training. MOL Group places special emphasis on disseminating the values and norms of the CoEBC through ethics-related trainings. Training of the CoEBC addressing all the topics covered by the Code (including anti-corruption) was successfully completed by employees in 48 companies of MOL Group (all employees must pass training on the CoEBC, regardless of category or region. This excludes BoD members). Supportive narrative can be obtained from the annual report.

https://molgroup.info/storage/documents/sustainability/mol_group_code_of_ethics.pdf

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

The MOL Business Partner Code of Ethics (BPCE) is applicable to all MOL Group business partners (defines in the BPCE as suppliers, contractors, service providers, customers, transaction partners, advisors, sponsorship or corporate giving co-operation and other contracted partners of MOL Group companies). The BPCE contains an Anti-Corruption section, and has been communicated to all business partners (all new suppliers must sign and act according to both the Code of Ethics and Business Conduct as well as Business Partner Code Of Ethics), and is available to any other persons or organizations on the link below. Supportive narrative, including BPCE contract coverage can be obtained from the Annual Report.

MOL discloses in the Data Library the number of corruption related ethics reports. During 2019, there were four incidents of corruption reported in the Ethics reporting system of MOL Group (including INA Group as well). None of the breach reports have been confirmed by the investigations. During 2019, no employees were dismissed or disciplined for corruption, and there were no incidents when contracts with business partners were terminated or not renewed due to violations related to corruption. During 2019 no public (external) legal cases regarding corruption were brought against the organization or its employees, although for the latter, one case is still ongoing in Croatia.

MOL Group does not disclose actions taken in cases of incident of corruption given the confidentiality of the topic.

MOL Group is dedicated to practicing fair market behaviour. MOL Group activities on the market must be conducted in accordance with the norms of fair competition and the spirit and letter of applicable competition law. MOL Group did not incur any fines or settlements related to anti-competitive practices in the past four fiscal years (FY 2015 to FY 2019). As of the time of the reporting, MOL Group was not involved in any legal actions regarding anti-competitive behavior, anti-trust, and monopoly practices. As of 2019, "anti-competitive practice" has been added to the list of complaints and it is now reported on a yearly basis through the Data Library under the indicator "Breach of anti-competitive practices", which includes anti-competitive behavior, anti-trust, and monopoly practices as per Hungarian and EU regulation.

MOL Group actively complies with all external tax regulations and disclosure requirements in all countries in which it operates. MOL Group's tax policy is designed to ensure compliance with all relevant tax regulations (with regard to both the spirit and the letter of those regulations) in each country in which MOL Group operates.

The Group Head of Tax formulates and owns the MOL Group approach to tax governance. This is governed by internal regulations at both a group and local level, which are reviewed on a regular basis. The Group Tax department together with local finance staff in the countries in which MOL Group operates ensure effective internal oversight of the tax process of MOL Group.

REASON FOR PARTIAL REPORTING: This Standard is effective for reports or other materials published on or after 1 January 2021. MOL Group does not disclose 207-1-a-I, 207-1-a-IV. MOL Group to disclose in line with GRI Standards as from 2021.

GOVERNANCE OF TAX: The Group Head of Tax formulates and owns the MOL Group approach to tax governance. This is governed by internal regulations at both a group and local level, which are reviewed on a regular basis. The Group Tax department together with local finance staff in the countries in which MOL Group operates ensure effective internal oversight of the tax process of MOL Group.

TAX RISK MANAGEMENT: MOL Group acknowledges that non-compliance with tax laws could expose MOL Group to fines, penalties, reputational damage, damage to relationships with a broad spectrum of key stakeholders and restriction of customs and excise privileges.

Tax risk is ideally managed by the prevention of unnecessary disputes with the tax authority. Tax risks in MOL Group are identified, assessed, managed and monitored via an internal tax risk management process. This process provides an appropriate framework to manage the compliance and transactional tax risks to which MOL Group may be exposed. There is no defined level of tax risk that MOL Group is prepared to accept. Professional judgement and expertise will be employed in order to determine how any identified risk should be managed. In the event of uncertainty:

- Written advice may be obtained from external tax advisers to support the internal decision making process; and/or
- MOL Group is willing to communicate directly with the appropriate tax authority and/or governmental representatives to obtain appropriate ruling(s).

MOL Group applies the arm's length transfer pricing principle to all intra-group transactions.

MOL Group monitors and reviews its operations to adjust its tax procedures when necessary to be compliant with any changes to the applicable tax rules and regulations, including transfer pricing guidelines.

REASON FOR PARTIAL REPORTING: This Standard is effective for reports or other materials published on or after 1 January 2021. MOL Group does not disclose 207-2-b, 207-2-c. MOL Group to disclose in line with GRI Standards as from 2021.

MOL Group's primary sold products consist of extracted oil, gas and condensate gas from upstream operations, as well as fuel from retail operations. As a result, recycled input materials used to manufacture the organization's primary products and services is not applicable to MOL Group.

However, recycled input materials are used by MOL Group in some of the following non-primary product lines:

MOL Group produces and sells rubber modified bitumen, a binder material used for asphalt mixture production and road construction, which is produced from bitumen and crumb rubber. Rubber crumbs are drawn from waste scrap tires. Used lubricants (not a primary product) are typically recycled in bitumen production processes following collection (GRI 301-3). More information can be obtained via the following link:

<https://mol.hu/en/about-mol/media-room/2490-developments-and-projects-in-zala-refinery-mol-rubber-bitumen-production-development-project-successfully-closed/>

In 2012, MOL-LUB introduced recycled PET packaging for its autochemical products (coolants, screenwasher fluids). Cardboard boxes are made partly from recycled paper.

<https://molgroup.info/en/sustainability/environment>

For polymers products as part of the Group's petrochemical operations, no recycled input materials is currently used. However, MOL Group, as part of its 2030 transformational strategy updates yearly of its future product portfolio and any developments concerning the use of recycled materials for future product lines. More information can be obtained in the Annual Report via the following link:

MOL Group continuously seeks to decrease its environmental footprint by reducing the amount of waste generated and developing treatment, recycling and recovery solutions. According to MOL Group's HSE Management System, a waste management programme is to be placed at each site, and among other requirements, it should contain methods for reuse, recycle and recovery of various materials. More information can be obtained from the link below:

<https://molgroup.info/en/sustainability/our-commitments>

MOL Group facilitates collection of used household cooking oil across its service stations.

<https://mol.hu/en/about-mol/media-room/2649-bring-your-used-cooking-oil-to-the-mol-filling-stations/>

Lubricants and Autochemicals are produced and sold by MOL Group's lubricant subsidiaries. These companies pay special attention to product stewardship as they are capable of recollecting and recycling a significant percentage of lubricant-related waste which is produced by industrial (B2B) and residential customers (B2C). MOL-LUB recollects used lubricant oil as well as their packages from its customers in Hungary. Links below:

B2B Direct delivery <https://mol.hu/hu/kenoanyag-es-autoapolas/ipar/szolgaltatasaink/faradt-olaj-es-egyeb-veszelyes-hulladek-visszagujtes-ipar/>

B2C Recollecting on 68 service stations <https://mol.hu/hu/kenoanyag-es-autoapolas/autosok/szolgaltatasaink/faradt-olaj-atvetel>

The amount of waste lubricants and packaging materials recollecting from customers can be obtained from the Data Library in the link below. The figures cover operations in Hungary (MOL-LUB), Croatia (Maziva) and Slovakia (Slovnaft) where the recollection of lubricants is performed or coordinated directly by MOL Group.

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

As an integrated oil and gas company, MOL Group has a significant energy consumption. Transparency concerning energy consumption is a high priority. Information on MOL Group's own energy consumption can be obtained through the Data Library or the Annual Reports through the following link:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

MOL Group does not use coal/lignite as a source of fuel/energy for any of its Downstream sites (Downstream makes up 87% of the Group's Greenhouse Gas Emissions Scope 1). Downstream sites include four refineries, two petrochemical facilities and two power generation sites.

PARTIAL REPORTING EXPLANATION:

MOL Group discloses a wide range of energy related data. However, MOL Group does monitor electricity, heating, cooling, and steam sold, but does not disclose it as prescribed per GRI Standards. Furthermore, MOL Group does not reference to points a (Total fuel consumption from non-renewable sources), b (Total fuel consumption from renewable sources), f. and g.. MOL Group continuously reviews the Group's sustainability reporting in comparison with existing and emerging reporting frameworks, whilst listening to capital markets and stakeholder feedback.. Disclosure of this data is under consideration.

The oil and gas industry, consumes large amounts of water for the production facilities but it also produces large amounts of water due to the extraction of oil and gas. MOL Group is constantly focused on finding ways to improve the handling methods of these large quantities of water. Issues related to water management are becoming increasingly critical in the lives of societies and companies, and require a permanent change in operations. Water management principles are similar to those followed in waste management; critical issues include: reducing fresh water intake, reuse and recycling of water and responsible water emissions (reductions and impact assessments). MOL Group is committed to reducing its environmental footprint, protect natural values and support international efforts that addresses climate-change related risks.

<https://molgroup.info/en/sustainability/environment>

The majority of MOL Group operations are situated in the EU region, and therefore water management practices are driven by the EU environmental acquis. However, via the HSE Management System, (link below), MOL Group has additionally set up requirements for water savings and water protection.

<https://molgroup.info/en/sustainability/our-commitments>

MOL Group's EU operations are not situated in water stressed areas. However, MOL Group has taken actions to assess the situation in more depth within the Groups international (ex-EU) operations which, according to external studies (such as water availability maps from the World Resource Institute), are situated in potentially water-scarce areas in Pakistan. As a result, a detailed hydrological study of the Teri water basin (Pakistan) was carried out with the aim of assessing available water resources and the potential impact of our operations. The study concluded that, due to local circumstances, MOL Group operations are not disturbing the water balance, and that water resources are satisfying the needs of the surrounding six villages and of MOL Pakistan. However, as a precautionary measure MOL Group has taken steps to protect water sources. These measures include periodical analysis of the quality of ground water through monitoring wells, ongoing implementation of the Water Conservation Action Plan developed in 2014, and the use of treated effluent water for gardening purposes. In December 2017 MOL Group carried out a water conservation awareness campaign at our sites.

MOL Group provides a range of water related data and supporting narrative that can be obtained from the Annual Report and Data Library via the following link:

The oil and gas industry, consumes large amounts of water for the production facilities but it also produces large amounts of water due to the extraction of oil and gas. MOL Group is constantly focused on finding ways to improve the handling methods of these large quantities of water. MOL Group HSE Management System has provisions for monitoring and reporting all water withdrawals as improving water efficiency not only reduces environmental footprint but often leads to a reduction in operating costs. The water used for different operational activities at MOL Group comes from various sources: it may be surface or groundwater, the municipal water supply, sea water, harvested rainwater or wastewater from production or other organizations. MOL Group monitors and report total water withdrawals from all sources. Information can be obtained from the Annual Report and Data Library through the following link:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

NEW DISCLOSURE: As of 2019, MOL Group provides water withdrawal broken down by main divisions in the group-wide Data Library. Link and name of indicator below:

The oil and gas industry, consumes large amounts of water for the production facilities but it also produces large amounts of water due to the extraction of oil and gas. MOL Group is constantly focused on finding ways to improve the handling methods of these large quantities of water. Total water discharge data, including a breakdown by treatment, can be obtained from the Data Library, while supporting narrative can be obtained from present Annual Report, via the link below:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

PARTIAL REPORTING EXPLANATION:

MOL Group discloses total water discharge as described above, but does not disclose water discharge to all areas, including a breakdown of this by types of destination or category as prescribed by the GRI Standards. MOL Group continuously reviews the Group's sustainability reporting in comparison with existing and emerging reporting frameworks, whilst listening to capital markets and stakeholder feedback.. Disclosure of water discharge to all areas, including a breakdown of this by types of destination or category, as well as point d. under 303-4 is under consideration.

The activities of the oil and gas industry have a direct and indirect impact on biodiversity. MOL Group recognizes these impacts and the fact that it must operate safely and responsibly in order to protect the natural environment and local communities.

Based on present locations of MOL Group sites, biodiversity is not a material issue for the group. No operational sites are currently owned, leased, managed in, or adjacent to, protected areas and areas of high biodiversity value outside protected areas.

However, MOL Group applies stringent standards to help reduce any impacts the operations of the Group may have, particularly in critical habitats (areas rich in biodiversity or which are under protection). For any new major projects, as well as for significant expansions of existing operations, MOL Group conduct biodiversity-related studies as a part of environmental and social impact assessment. This is an internal requirement established via the HSE Management System (Section IX Environmental Management / IX.14 Biodiversity). This can be obtained via the link below:

https://molgroup.info/en/show/sustainability/hse_management_system_2018.pdf

TO BE READ AND UNDERSTOOD IN CONJUNCTION WITH GRI 304-1 / 304-2 / 304-3 / 304-4

The activities of the oil and gas industry have a direct and indirect impact on biodiversity. MOL Group recognizes these impacts and the fact that it must operate safely and responsibly in order to protect the natural environment and local communities. Based on present locations of MOL Group sites, biodiversity is not a material issue for the group. However, MOL Group applies stringent standards to help reduce any impacts the operations of the Group may have, particularly in critical habitats (areas rich in biodiversity or which are under protection). For any new major projects, as well as for significant expansions of existing operations, MOL Group conduct biodiversity-related studies as a part of environmental and social impact assessment – this is an internal requirement established via the HSE Management System.

In 2014 a group-wide assessment was conducted to identify potentially sensitive areas which should be the focus of future efforts. This study was updated in 2017 to reflect operational changes. In 2017 we had identified 203 sites that are in or adjacent to protected areas. However, the assessment re-confirmed the fact that MOL Group's exposure to biodiversity risks is not significant. In total, only eight sites are located in biodiversity-critical areas (six exploration and production, and two downstream), while 35 exploration and production operations are located close to or within Natura 2000 sites (European nature conservation areas). Two of the exploration and production operations are situated in water-stressed areas while one can be found in a water-protected landscape.

All sites that are in located in biodiversity critical areas are covered by biodiversity action plans that are annually reviewed in accordance with the HSE Management System. The MOL Group HSE Management System has introduced the compulsory elaboration of the Environmental and Social Impact Assessment studies for all new development or major modifications of the existing facilities and the obligation to have Biodiversity Action Plans in place for all critical sites.

PARTIAL REPORTING EXPLANATION:

MOL Group does not disclose the number of significant operating sites in which biodiversity risk has been assessed and monitored, but not in percentage terms as prescribed by the GRI Standards., nor does MOL disclose OG-4 - 2.2 (Biodiversity Action Plan methodology).

As an integrated oil and gas company, MOL Group has a significant carbon footprint. Transparency concerning the footprint of MOL Group operations is a high priority. MOL Group's total carbon footprint includes direct emissions from MOL Group operations (Scope-1). Information on MOL Group's GHG Scope 1 emissions, including supporting narrative, can be obtained in the Data Library, the Annual Report and on the Group website via the following links:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

<https://molgroup.info/en/sustainability/climate-change>

MOL Group GHG Scope 1 calculation is based on the following methodology: Venting, Physical and Chemical processing, Flaring, Generation of heat, steam and electricity (incl. natural gas), Transportation (fuel for corporate vehicles). MOL Group's Scope 1 is made up of CO₂ (GWP=1) and Methane (GWP=25). Scope-1 does not include Hydrofluorocarbons, Nitrous oxide, Perfluorocarbons and Sulphur Hexafluoride as these are not relevant. In its Scope 1 calculation, MOL Group does not account for Biogenic CO₂ emissions.

Methodology:

The Greenhouse Gas Protocol <https://ghgprotocol.org/sites/default/files/standards/ghg-protocol-revised.pdf>

IPIECA: http://www.ipieca.org/media/2849/og_industry_guidance_on_voluntary_sustainability_reportnig_3rd_ed_2016.pdf

FUTURE MOL GROUP SCOPE 1 EMISSIONS

In addition to full disclosure around current Group emissions, MOL Group is fully transparent with the future footprint of the Group. During 2018, MOL Group, in cooperation with sustainability advisor Quantis, carried out its first climate change scenario analysis. The scenario analysis was completed by estimating the annual GHG Emissions Scope 1, 2 and 3 of up until 2030 using current group operations combined with the Group's 2030 strategic plans, including a number of forward looking assumptions. The analysis applied three International Energy Agency scenarios, using as basis for calculation the decrease of oil related tonnes of CO₂ emissions in transport for the years 2017-30 for each scenario, with reduction factors calculated based on transport related emissions for EU28. Details can be obtained under MOL Group capital markets communication materials (*Investor Presentation - February, 2019* – slides 78, 79) via the link below:

As an integrated oil and gas company, MOL Group has a significant carbon footprint. Transparency concerning the footprint of MOL Group operations is a high priority. MOL Group's total carbon footprint includes indirect emissions related to purchased energy (Scope-2). MOL Group Scope 2 emissions are disclosed both by market and location based. Information on MOL Group's GHG Scope 2 emissions, including supporting narrative, can be obtained in the Data Library, the Annual Report and on the Group website via the following links:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

<https://molgroup.info/en/sustainability/climate-change>

Scope 2 is based on the following calculation: Total GHG emissions from purchased electricity consumption + Total GHG emissions from other indirect energy consumption. For operations inside the EU, MOL Group applies the ABI standards (link below) to reach GWP values to calculate total emissions in CO2 equivalent (CO2e). For operations outside the EU, MOL Group applies the International Energy Agency. For standards, methodologies, assumptions and/or calculation tools used:

The Greenhouse Gas Protocol <https://ghgprotocol.org/sites/default/files/standards/ghg-protocol-revised.pdf>

ABI: https://www.aib-net.org/sites/default/files/assets/facts/residual-mix/2018/AIB_2018_Residual_Mix_Results_v1_1.pdf

IPIECA: http://www.ipieca.org/media/2849/og_industry_guidance_on_voluntary_sustainability_reportnig_3rd_ed_2016.pdf

Explanation on the difference between location and market based scope 2 emissions, refer to the *GHG Protocol Scope 2 Guidance* in the following link:

As an integrated oil and gas company, MOL Group has a significant carbon footprint. Transparency concerning the footprint of MOL Group operations is a high priority. MOL Group's total carbon footprint includes the emissions not related to the Group's operations but to the use of our products or emissions generated by our suppliers (Scope-3). Information on MOL Group's GHG Scope 3 emissions, including a detailed breakdown and supportive narrative, can be obtained in the Data Library, the Annual Report and on the Group website via the following link: <https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

For the 2019 Annual Report, two new lines were introduced in the calculation of Scope 3 emissions to more accurately reflect the total footprint of the Group:

Category 1. Purchased Goods and Services (bio-fuel for blending): MOL Group has historically included in its Scope 3 calculation the footprint of the externally produced crude oil and purchased by MOL for processing in the Group's refineries. For the 2019 Scope 3 calculation, MOL Group likewise includes the footprint of the biofuel produced externally and purchased for the blending into the Group's fuel. In line with EU regulation, each biofuel purchase transaction includes the CO2 footprint of its production. For the calculation of CO2 emissions, MOL Group applies CO2 conversion factors from the Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources ([LINK](#))

Category 11. Use of sold products (refinery excl. naphtha). As of 2019, for the CO2 emission Factor (conversion rates) of its different sold refinery products, MOL Group applies the Compendium of Greenhouse Gas Emissions Methodologies for the Oil and Gas Industry from the American Petroleum Industry, pages 148-151 in the following [LINK](#). The methodology includes references to "global warming potential" (GWP). MOL Group includes in the calculation the CO2 impact of following sold products: diesel, motor gasoline (petrol), jet fuel, heating oil, LPG, fuel oil and petroleum coke (excludes naphtha as its byproducts are accounted for under Category 12). Furthermore, as of 2019, the average national blend of biofuels for both gasoline and diesel has been introduced to the calculation. TO BE READ AND UNDERSTOOD WITH OG-13

Category 11. Use of sold products (Natural Gas): *As of 2019, MOL Group does no longer calculate with natural gas produced, but with natural gas sold for the CO2eq calculation*

Category 12. End-of-Life Treatment of Sold Products (polymers): This category includes the expected end-of-life emissions from polymer products sold during the accounting year, independent of the year in which they are actually disposed of. The Group's petrochemical sales (2019 MOL Group sales are available from the 2015-2019 Data Library [LINK](#)) are made up polymers, butadiene and monomers (polymers make up around three quarters of total petrochemical sales). GHG Protocol Scope 3 Standard directs companies to consider estimating emissions for this category if they can reasonably estimate the downstream emissions associated with end use. Consequently, for the calculation of the *End-of-Life Treatment of Sold Products calculation*, only polymer sales have been considered, as emissions associated with end use can be reasonably estimated. The production of the Group's polymers (plastics) is made up for LDPE, HDPE and PP, with the first two accounting for around half the sales. The Group's polymers are manufactured by its two petrochemical plants in Hungary and Slovakia. As a result, most of the Group's polymers (LDPE, HDPE and PP) are sold on European markets. LDPE and HDPE are mostly sold for the packaging industry, whereas PP is sold to the automotive industry. It is assumed that the products would be used and disposed of in the countries to which MOL Group sold them, therefore EU disposal statistics from Plastics Europe's "*Plastics – The facts 2019*" report were applied for the end-of-life treatment (disposal) for the plastic packaging industry (MOL Group's case this applies to LDPE and HDPE). For 2018 (latest available data at the time of reporting) the split was 19% for landfill, 39% for incineration and 42% for recycling ([LINK](#)) for the packaging industry. For PP, a Vehicle Recycling Rate of 87% has been applied in line with EU statistics ([LINK](#)), with an assumption being made for the remaining 13% of one fourth being incinerated and three fourths being landfilled. For incineration, in the absence of reliable data, an assumption has been made for 50% being incinerated with energy recovery (an CO2 emission factor of 0.9 tonnes of CO2eq per tonne of polymer was applied) and the remaining 50% without energy recovery (an CO2 emission factor of 3.1 tonnes of CO2eq per tonne of polymer has been applied) for LDPE, HDPE and PP. For landfill, and in line with the Guidance for Accounting and Reporting Corporate GHG Emissions in the Chemical Sector Value Chain, and following engagement with WBCSD, LDPE, HDPE, and PP have been classified as durable polymers (products which are known to not degrade within a period of 100 years), therefore no CO2 emissions are generated within the time frame and therefore zero emissions are reported under landfill. For the Scope 3 calculation, recycling was excluded (measured at zero) in line with GHG Protocol Guidance. **CONTINUES NEXT SLIDE SLIDE**

MOL Group is committed to reducing its environmental footprint. Recognizing the importance of increasing energy efficiency MOL Group has taken a number of steps at production facilities over the past few years to improve the efficiency of energy consumption and mitigate or reduce eventual energy losses. MOL Group launches each year a series of energy efficiency reduction measures affecting its own direct emissions. Yearly energy efficiency measures and results are presented are covered in the Annual Report:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

Information on the future reduction in GHG emissions as a result of the Group's 2030 strategy can be obtained under MOL Group capital markets communication materials (*Investor Presentation - February, 2019* – slides 78-79) via the link below:

<https://molgroup.info/en/investor-relations/publications#nav-investor-presentations>

Information on the future reduction as part of MOL Group SD 2020 strategy can be obtained from the link below:

MOL Group operates a wide range of technologies and equipment, and the oil and gas industry is considered to be a significant source of air pollutants. Air emissions data can be obtained from the Data Library, as supportive explanations concerning decreases and/or increases can be obtained from the Annual Report. Both can be reached via the link below:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

<https://molgroup.info/en/sustainability/environment>

MOL Group is constantly monitoring these emissions and has programmes in place to reduce its volatile organic compounds (VOC), SO₂, NO_x, CO and Particulate Matter (PM) emissions. For SO_x, NO_x, CO, PM emissions MOL Group uses direct measurement of emissions. For VOC emissions MOL Group uses leak detection and repair programme (LDAR) that has been in place since 2010. Furthermore, MOL Group sells NO_x reducing additives reducing nitrogen oxide emissions from vehicles equipped with SCR (selective catalytic reduction) systems.

<https://mol.hu/en/lubricants-autochemicals/cars/adblue/adblue/>

NEW DISCLOSURE: As of 2019, MOL Group provides the following Air Emissions broken down by main divisions in the group-wide Data Library: Sulphur Dioxide (SO₂), Nitrogen Oxides (NO_x), Volatile Organic Compounds (VOC), Carbon Monoxide (CO) and Particulate Matter (PM). Link and name of indicator below.

PARTIAL REPORTING EXPLANATION:

MOL Group monitors and reports on a range of air emissions as described above. However, MOL Groups does not currently report on Persistent Organic Pollutants (POP) nor Hazardous Air Pollutants (HAP) as prescribed by the GRI Standards. Furthermore, for air emissions that are disclosed (VOC, SO₂, NO_x, CO and PM), MOL Group discloses only Group-level figures and not by country and business unit as prescribed by the GRI Standards. MOL Group continuously reviews the Group's sustainability reporting in comparison with existing and emerging reporting frameworks, whilst listening to capital markets and stakeholder feedback.. Disclosure of POP, HAP and air emissions by country and/or business unit is under consideration.

The majority of MOL Group operations are situated inside the EU, hence water management practices are driven by the EU environmental acquis. EU water related standards as well as local related regulations are strictly followed. For operations outside the EU region, local legislation apply as well as industry best practices. According to MOL Group HSE Management System, all key water pollutants are monitored, controlled, reported and measures are applied to reduce water pollution and minimize smells and odors from operations. MOL Group discloses the total amount of petroleum hydrocarbons (TPH), Chemical Oxygen Demand (COD) biochemical oxygen demand (BOD) and suspended solid (SS) content from discharged waters. These are considered as substances of concern for the industry. Data can be obtained from the Data Library, as supporting explanations can be obtained from the Annual Report, both via the link below:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

Since 2017, MOL Group began to monitor and report via the CDP the quantities of water discharges by treatment level. Additional information concerning waste management at MOL Group can be obtained through the following link:

<https://molgroup.info/en/sustainability/environment>

PARTIAL REPORTING EXPLANATION:

MOL Group does not disclose water discharge by quality and destination as prescribed by the GRI Standards. MOL Group continuously reviews the Group's sustainability reporting in comparison with existing and emerging reporting frameworks, whilst listening to capital markets and stakeholder feedback.. Disclosure of water discharge by quality and destination is under consideration.

MOL Group continuously seeks to decrease its environmental footprint by reducing the amount of waste generated and developing treatment, recycling and recovery solutions. Due to the complexity of operations, MOL Group waste streams and types are also very diverse. The company's operations produce a wide range of solid and liquid wastes (including oily sludge, waste chemicals and spent catalysts, etc.). MOL Group maintains hazardous and non-hazardous waste inventories and each site has to have a waste management plan, in accordance with HSE Management System provisions (link below).

https://molgroup.info/en/show/sustainability/hse_management_system_2018.pdf

As the majority of MOL Group operations are located in Europe, the EU legal requirements are followed, complemented with specific local requirements imposed by authorities. Information regarding MOL Group's waste and disposal can be obtained from the Data Library, with supporting explanations being provided in the Annual Report. These can be obtained through the following link:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

Additional information concerning waste management at MOL Group can be obtained through the following link:

<https://molgroup.info/en/sustainability/environment>

NEW DISCLOSURE: As of 2019, MOL Group provides Total Waste Generated (both hazardous and non-hazardous) down by main divisions in the group-wide Data Library. Link and name of indicator below.

TAILINGS DAM: Whilst a mostly mining industry issue, extractive companies in the oil & gas industry may have exposure to tailing dams through their upstream divisions. As of the date of reporting, MOL Group has no involvement in tailing storage facilities, neither across own operations nor through its joint ventures.

PARTIAL RERPORTING EXPLANATION: MOL Group does disclose total weight in tonnes of hazardous and non-hazardous waste, but does not provide a breakdown into the eight sub-indicators as prescribed by the GRI Standards. Nor does MOL Group disclose how each waste disposal method has been determined. Disclosure of the breakdown and how waste disposal has been determined are under consideration.

MOL Group is aware of the impact that spills can have on the environment and communities, so taking spill prevention measures into account is a priority when designing and operating Group facilities. Regular maintenance and inspection campaigns are conducted and emergency response plans are in place and are constantly updated for each site. When a spill is detected, all the necessary measures are immediately taken to restore the pre-spill status of the affected area. In 2016, MOL Group established the strategic objective of reducing the number of spills of over 1 barrel by 30% by 2020. MOL Group began operating off-shore installations in 2018 (in the Croatian Adriatic Sea and Norwegian North Sea). In these cases MOL Group ensures that measures are in place to protect marine ecosystems and prevent spills. Data and supportive narrative regarding MOL Group's spills can be obtained from the Data Library and the Annual Report:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

<https://molgroup.info/en/sustainability/environment>

NEW DISCLOSURE: As of 2019, MOL Group provides disclosure of spills impacting shorelines with ESI rankings 8-10, as well as number of spills Number of Spills (> 1m3) was expanded to Logistics (disclosure was limited to Upstream and Refining) in the group-wide Data Library. TCFD

From 2015 MOL Group started to centrally collect and report the quantities of hazardous wastes that are exported/imported at operations. Due to the fact that there are no proper treatment facilities for some waste streams at local level, limited amounts of very specific wastes (e.g. refinery catalysts/tank sludge) are exported for treatment to Germany and/or Austria. The total amount of hazardous waste exported for treatment can be obtained in the MOL Group Data Library via the link below. A total of 4,503 tons of hazardous waste was exported in 2018, or 3.2% of total hazardous waste. No hazardous waste was imported in 2018.

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

Additional information concerning waste management at MOL Group can be obtained through the following link:

<https://molgroup.info/en/sustainability/environment>

PARTIAL REPORTING EXPLANATION:

MOL Group does not disclose hazardous waste transported in the reporting period by destination, including transport across operational boundaries and within operations as prescribed by the GRI Standards. Disclosure is under consideration.

TCFD

Significant quantities of produced water are managed by MOL Group's exploration and production facilities. In order to minimize impact, MOL Group aims to re-inject, whenever feasible, the produced water. At all of the Group's EU operations, produced water is re-injected, and as of 2017, the water reinjection system has become fully operational in Pakistan. As result, water quantities sent to evaporation ponds in Pakistan have been reduced by 99%. Compared to 2016, the amount of re-injected water is higher than 100% because it covers the total amount re-injected. Water re-injection takes place at Exploration and Production sites to maintain underground pressure, and additional water is also injected to increase pressure of produced water at MOL Group EU operations. Strategies and criteria for the disposal and treatment, and standards used for quality of produced water discharged, including hydrocarbon and salinity, are applied using industry best practice: the IOGP Guidelines for Produced Water Injection

<https://www.iogp.org/bookstore/product/guidelines-for-produced-water-injection/>

Information regarding MOL Group's volume of produced water can be obtained in the Data Library through the following link:

Flaring refers to the controlled burning of hydrocarbons for technical or safety reasons. The gas flared in Exploration and Production is typically 'associated petroleum gas' (APG), while in Downstream gases generated during the refining process are usually flared for safety reasons. Oil and gas leakages are considered to be losses of valuable material that represent operational inefficiency.

Venting of gas refers to release without burning. Flaring is important from both an environmental point of view and the perspective of operational efficiency. In recognition of the importance of this topic, MOL Group in 2015 decided to join the Zero Routine Flaring Initiative of the World Bank.

Past and present flaring and venting data can be obtained from the Data Library via the link below:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

PARTIAL REPORTING EXPLANATION: MOL Group does not disclose OG-6-2.4 (Vented hydrocarbon broken down by country) and OG-6-2.5 (Volume of flared and vented HC in relation to volume produced) as recommended by GRI Standards. Disclosure is under consideration.

TO BE READ AND UNDERSTOOD IN CONJUNCTION WITH GRI 102-9 (SUPPLY CHAIN) AND GRI 204-1 (LOCAL SUPPLIERS)

MOL Group introduced a new group-level, integrated web based solution that deals with all supplier-related information, from the pre-screening through pre-qualification to the contracting stage. The system is called eSourcing (link below). This system includes automated assessment of risks associated with suppliers based on legal, ethical, financial, health and safety, as well as environmentally related data and documentation. It also facilitates the supplier pre-qualification process. In 2018 contractor post evaluation system has been implemented to support contractor performance evaluation.

SUPPLIER REGISTRATION – LIST OF QUESTIONS (ENGLISH)

https://molgroup.info/images/molgroup/pdf/other/online_bidding_registration/Supplier_registration-List_of_questions_English.pdf

It is obligatory for all new suppliers to be screened using a number of environmental criteria. As a result, all new suppliers were screened using HSE criteria during 2018. Furthermore, all new suppliers must sign and act according to both the Code of Ethics and Business Conduct as well as Business Partner Code Of Ethics. Supporting narrative under the Ethics chapter of the Annual Report regarding ethics coverage in supplier contracts: MOL Group provides supporting narrative under the Contractor Safety chapter of the annual report, as well as Code of Ethics coverage in supplier contracts under the Ethics.

TO BE READ AND UNDERSTOOD IN CONJUNCTION WITH GRI 102-9 (SUPPLY CHAIN) AND GRI 204-1 (LOCAL SUPPLIERS)

MOL Groups asks its suppliers to get acquainted with MOL Group's ethical standards, follow these requirements all times, and extend them to their own supply chain. We expect partners to immediately inform MOL Group on a breach of the Code of Ethics and Business Conduct and the implementation of corrective actions regarding any activity performed in connection with MOL Group operations. In the course of operation of our partners (i.e. by own employee conduct or by their suppliers or sub-contractors, intermediaries, proxies or agents), MOL Group reserves the right to apply corrective measures up to and including termination of business co-operation in accordance with the applicable law. Such breaches can be determined in accordance with the principles stated in the MOL Group Ethics Council Rules of Procedure (Appendix of the MOL Group Code of Ethics and Business Conduct - link below) by MOL Group Ethics Council. If non-compliance or breach emerge, MOL Group partners shall co-operate in clarification. As part of this co-operation MOL Group companies participating in the clarification may ask for verification and if there is a reason for concern, for corrective measures by the following means: a) Self-Assessment: e.g. fill in a questionnaire, conduct internal investigation or solicit information from a third party, e.g. a data provider or public information on compliance; b) certifications/statements: e.g. certification or statement confirming compliance) Pre-Qualification Audits: MOL Group or a third party acting on MOL Group's behalf may contact business partners and ask for permission to verify compliance on their site. MOL Group also regularly performs On-Site audits to verify compliance to MOL standards during suppliers activities on our area of operation. Additional information on MOL Group's supply chain can be obtained via the below link:

https://molgroup.info/storage/documents/sustainability/mol_group_code_of_ethics.pdf

https://molgroup.info/storage/documents/sustainability/business_partner_code_of_ethics/business_partner_code_of_ethics_2017_english.pdf

PARTIAL REPORTING EXPLANATION: MOL Group conducts HSE (incl. environmental) evaluation for all contractors. However, MOL Group does not monitor, therefore does not register negative environmental impact in the supply chain

TCFD

MOL Group fulfills actual EU requirements and national standards, therefore the benzene, Lead and Sulfur content in different fuels suitable to EU standards. MOL Group's refineries built new hydrotreater units in all locations for sulfur content reduction. Furthermore MOL Group refineries use different high octane blending component (ethanol, ETBE, MTBE, alkylate), which ensure the production of lead-free gasolines. The benzene is separated from the gasoline fraction and this modification reduced benzene content of the gasoline. The quality of the fuels of MOL Group is in line with EU and national regulations. MOL Group has product data sheets, which are available for the customers through the webpage (link below) or directly from the sales organizations.

MOL:

Gasoline: https://mol.hu/images/pdf/Vallalatiugyfeleklek/Uzemanyagok/mol_motorbenzinek_termeklap.pdf

Diesel: https://mol.hu/images/pdf/Vallalatiugyfeleklek/Uzemanyagok/mol_dizel_termeklap.pdf

INA:

Safety data sheets (SDS) of fuels provides Benzene content (range). Lead and Sulfur content in fuels are not part of Section 3 (Composition) and Section 9 (physical and chemical properties) of SDS (link below) and are not published. Those data (including exact Benzene content) are part of the product specification and are communicated to the customer. INA does not use Lead based additives in produced fuels.

MOL Group believes that investment in employee wellbeing contributes to employee engagement and helps maximize an innovative approach to reach full potential. Larger MOL Group companies and subsidiaries offer a wide range of initiatives supporting employees in respect of their health, financial planning, workplace environment and community and employer care in every life stage. MOL Group cares for the wellbeing of its constantly changing and diverse, multigenerational workforce whose needs are met through a wide range of programs, benefits, initiatives and wellbeing programs, making up an essential part of employees' Total Remuneration. Insurance is a crucial benefit form in the Oil & Gas industry, and MOL Group puts strong focus on the health and safety of its workforce with various work conditions. Personal insurance is provided to all employees across the Group in various forms. MOL Group ensures that employees are covered by social benefits and pension. Employees may choose a voluntary pension fund and can use a part or the whole of their fringe benefits for this purpose. MOL Group provides attractive benefit schemes across its locations to ensure competitiveness on local markets together with all elements of the pay mix. When benefit elements are defined, local legislation, tax environment and competitiveness on local markets are screened to provide Group-level consistency. Flexible working options are available in several companies across the Group in order to leverage creativity and productivity of employees, encourage diversity, and a sustainable work-life balance. The two main forms are FlexiPlace which enables working from home and FlexiTime which enables flexible start and end working time. At MOL Group, employment is the basis of benefits provided and does not depend on whether an employee is full-time or part-time. However, certain benefits provided to part-time employees are offered on a pro-rata basis.

MOL Plc. Equal Opportunity Plan was in effect from September 2017 until 2019 with focus areas of wellbeing, and work-life balance, gender equality and age diversity, parental status, physical abilities and ethnicity. Furthermore, MOL Group is committed to prohibiting and preventing discrimination of any kind, including matrimonial or parental status. This is enshrined into the MOL Group Code of Ethics and Business Conduct, under section IV.2.2.Equal Treatment And Opportunities. All employees of MOL Group are entitled to parental leave regardless of gender. The length of the parental leave will vary depending on the current rules of each jurisdiction in which MOL operates. MOL Group complies with all national legislation in all jurisdictions in which it operates.

OMISSION EXPLANATION: MOL Group does monitor and register the following information:

- Total number of employees that took parental leave, by gender.
- Total number of employees that returned to work in the reporting period after parental leave ended, by gender.
- Total number of employees that returned to work after parental leave ended that were still employed 12 months after their return to work, by gender
- Return to work and retention rates of employees that took parental leave, by gender.

MOL Group does not disclose these figures as prescribed by the GRI Standards. MOL Group will aim to increase disclosure around parental leave in line with capital markets and stakeholder feedback as from 2021.

MOL Group has implemented an occupational health and safety management system.

<https://molgroup.info/en/sustainability/our-commitments>

https://molgroup.info/en/show/sustainability/hse_management_system_2018.pdf

The HSE management system has been implemented at MOL Group based on the recognition of the value of a risk based management system, including standards and guidelines which totally covers all aspects of HSE. However, given the integrated nature of the business, MOL Group, is active in several industries though different businesses in different jurisdictions. As a result, in some cases, legislation requires to have some specific ISO/OHSAS related accredited certifications. The list of countries and/or businesses which have standard based certifications, required by either law or customers (internal/external) can be obtained from the link below:

<https://molgroup.info/en/sustainability/ethics-and-governance>

The HSE management system covers all workers, activities, and workplaces. No workers, activities, or workplaces are left uncovered.

Based on the hazards and risks that are identified, assessed and periodically reviewed, the appropriate risk assessment methodology must be applied by competent personnel. Risks and mitigation action must be communicated to all affected parties. The risks of changes must be assessed and managed. All MOL Group-level and local-level Business Units/Functional Units and legal entities must comply with local risk assessment legislation relevant to their activities (e.g. local SEVESO regulation, workplace risk assessment, etc.). All kinds of hazards and risks arising from the operation of any MOL Group Company must be identified, assessed, registered, controlled and regularly reviewed to prevent or reduce the likelihood and consequence of incidents to as low level as reasonably practicable (ALARP). The following hierarchy of control must be followed as far as is reasonably practicable when defining risk mitigation measures: a) elimination; b) substitution, c) engineering control, d) administrative control, and e) personal protective equipment.

Incident Investigation: Maximum 2 working days after an incident occurred or in other, duly justified cases the initial consequence classification must be reviewed and modified via Enablon so that electronic notifications can be sent out, if necessary. An Investigation Team must be nominated within 2 working days following the occurrence of an incident by the responsible person. Depth of investigation, selection of investigation method or involvement of specialists/experts (e.g. authorized fire safety experts) must be determined based on severity or nature of the incident. Incident investigations need to be able to satisfy relevant statutory legal requirements and to be usable in relation to potential insurance claims or litigation. Investigation Reports must be finalized as soon as possible, but within a maximum of 60 calendar days (including validation(s) in Enablon) from the time of incident occurred.

In the case of HSE events, including near-miss cases especially with high potential (HiPo) consequences it is crucial to identify why and where things have gone wrong and how they should be corrected to prevent future recurrence, losses and interruptions to operations by improving the management system and organizational culture that allowed the incidents to occur in the first place. MOL Group's Incident Reporting and Investigation System (IRIS) integrates immediate electronic reporting of incidents through emailing and the tool we employ for thorough incident investigation. For investigating serious incidents we apply the industry standard 'Tripod Beta' methodology as one of acceptable root cause analysis systems. Lessons learnt are shared throughout the company in comprehensive summaries and photos as part of the HSE Alert system to increase the level of awareness of all employees. We are committed to share all information in a personalized way as much as possible. <https://molgroup.info/en/sustainability/health-and-safety>

The protection of employees from occupational health hazards is assured by compliance with national laws and internal MOL Group regulations and practices, combined with high quality operating staff. MOL applies best practices in its local operations which are continuously improved. Regularly required occupational health and medical services:

- the service provider carries out the job suitability tests specified in the separate legislation and initiates the necessary specialist examinations,
- investigate, in accordance with the specific legislation, occupational diseases, cases of increased exposure,
- examine the health effects of work,
- provide personal protective equipment advice,
- provide information on the working conditions of employees,
- carry out periodic medical examinations for each occupational group,
- guides the occupational health records of employees properly;
- conducts an examination of the conditions of employment of workers with disabilities,
- investigate occupational diseases and suspicions, organize special investigations, and conduct statutory procedures,
- complies with all reporting obligations for occupational health.

MOL Group's internal communication with the workers is assured by compliance with national laws and internal MOL Group regulations and practices. "Work safety councils" are a present across MOL Group operations, and provide a constant communication channel within MOL Group between management and – independently elected – MOL employees. "Work safety councils" are a legal requirement in Hungary. The task of the works safety council is to participate in the decisions of the employer, and the basis of its operation is the cooperation of employers and employees. The law allows employees to exercise their right to participate in a number of ways, depending on the number of employees and the structure of the employer organization. European Works Councils (EWC) are information and consultation bodies representing employees in European multinational companies. MOL Group has a delegation.

PARTIAL REPORTING EXPLANATION:
MOL Group does not provide information on 403-4-b (information about the work, authority, frequency of meeting of Work Safety Councils)

MOL Group provides regular occupational health and safety trainings for employees and for workers who are not employees but whose work and/or workplace is controlled by the organization (contractors). This includes generic training as well as training on specific work-related hazards, hazardous activities, or hazardous situations. Supportive narrative is provided in the Annual Report on examples of training provided:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

Recruitment, selection and placement processes must be in place to ensure that personnel are qualified, competent and physically and mentally able to meet job requirements. Legally required HSE qualifications must be met for specific jobs. Employee and contractor/supplier HSE and process safety competencies and training needs must be identified, documented and periodically reviewed. Training plans and calendars must be synchronized with HR for the best resource management. Written procedures must exist to govern HSE Competency Assessments and Training procedures at company level. It must contain the following:

- Content; length of the induction HSE Training and the way of examination;
- Requirements regarding the training of visitors, students and part time employees;
- Practical training requirements if applicable
- Refreshing training requirements including frequency (yearly frequency is recommended) and topics: induction and practical training topics, new HSE requirements becoming effective since the last training, and lessons learned from incidents.

Health risks are assessed and managed by prevention and protection, providing employees with information and educational initiatives. MOL Group's workplace health promotion programs serve as an additional tool to increase the personal health awareness of our workforce not only at the workplace, but also in their private lives.

MOL Group conducted health management gap analysis at all operating companies in order to identify the critical gaps to our standards and required level of compliance, and set appropriate actions to eliminate them in an acceptable period of time. We believe that by implementing the identified and approved development actions MOL Group definitely takes a step ahead towards providing healthy workplaces and appropriate health management, including emergency response for all employees. According to MOL Group health management principles we order health screenings at least once per 3 years to all of our employees based on a detailed screening protocol (depending on the nature of their work). Besides this, we conduct screenings for known health risks (such as diabetes, cholesterol, stool blood test, calculation of Body Mass Index (BMI), etc.) and we draw up an individual health plan for all of our employees. Individual health plans are a professional starting point, but we also offer special workplace health promotion programs to our employees, that include medical screenings (cardiovascular package, cancer prevention package, musculo-skeletal package, vaccination programs), healthy life style advice, dietary advice, stopping smoking programs and a wide range of physical activity programs.

At the Family Days that are organized by the companies, the family members of our employees have the opportunity to participate in health screening for different health risks (diabetes, cholesterol, BMI, etc.). Health promotion programs are organized locally in order to contribute to both the health and well-being of employees. Some selected best practices include: Healthy food Program at Slovnaft, HEALTH+ program at INA and STEP – Take a step for your health – program at MOL. For our colleagues travelling to and working in countries with a high risk or incidence of communicable diseases we conduct medical screening before travelling and after, and we supply the required vaccinations as well. MOL Group is providing 24/7 services for any medical evacuation (MEdEvac) needed around the globe for its expatriates and travellers, and in special situations the local employees of MOL operations if medically necessary, by contracting one of the leader service providers of the industry. Contractors of MOL Group are not covered by these initiatives.

Ownership of Product Stewardship within MOL Group and relevant member companies must be assigned and responsibilities for individual Product Stewardship process steps must be defined. Product stewardship process must identify risks related to dangerous substances/products at an early stage and manage those risks along the value chain (i.e. development, authorization, registration and restriction on their manufacture, market distribution, use, disposal or recycle), thereby enabling adequate protection of human health and the environment.

New product assessments must be conducted prior introduction to market in order to identify and address health, safety and environmental hazards and risk associated with their normal use and potential misuse. Periodic re-assessments must be conducted if product specification changes, including collection and review of adverse effects reported or experienced. Records of assessment and re-assessment must be kept up-to-date. A product dossier must be established for all dangerous products bringing together all the information that the company holds on a product throughout the lifecycle.

MOL Group's objective continues to be in the top quartile of Oil and Gas companies in terms of safety performance. Transparency concerning worker related injuries is a high priority. MOL Group provides a comprehensive list of data around worker related injuries, covering both employees and those workers who are not employees but who work and/or whose workplace is controlled by MOL Group, as prescribed by the GRI Standards. Rates have been calculated based 1 million working hours, as one of the two options being suggested by the GRI Standards. The full list can be obtained from the Data Library (link below). Furthermore, supportive narrative explaining the causes of fatalities and worker related injuries (covering personal, process, contractor and road safety) during the last reporting period can be obtained from the Annual Report. Supportive narrative also includes actions taken or underway to eliminate hazards and minimize risks. No workers have been excluded from these calculations.

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

Furthermore, MOL Group provides worker related injury figures (including supporting explanations) on a quarterly basis through its quarterly earnings reports, under the section "Sustainable Development & HSE Highlights". Quarterly capital markets communication materials can be obtained through the following link:

<https://molgroup.info/en/investor-relations/publications#nav-quarterly-reports>

NEW DISCLOSURE: As of 2019, MOL Group provides disclosure of a number of new metrics in the group-wide Data Library. The new metrics below. Link and name of indicator as the bottom of the page.

- Fatalities further broken down for both own-staff and contractors in Downstream into Downstream Production (Refining & Petrochemicals, and Logistics), as well as Consumer Services.
- Fatal Accident Rate provided for both Downstream and Upstream for both own-staff and contractors
- TRIR has been broken down by main division, including Upstream, Downstream Production (Refining & Petrochemicals), Logistics and Retail
- Lost Time Injury Frequency has been further broken down to include the Consumer Services divisions
- HAZMAT and Non-HAZMAT Transportation Road Accident Rate for the Group

PARTIAL REPORTING EXPLANATION:

MOL Group does monitor and register the total number of hours worked, used as the basis for the calculation. Nonetheless, MOL Group does not disclose number of worked hours as prescribed by the GRI Standards. However, reasonable assurance has been provided by the external auditor for the Total Recordable Injury Rate for own employees (includes worked hours) in line with GRI requirements. Refer to the "Independent Practitioner's Assurance Report" inside the Annual Report for further information (first link above). Disclosure of hours worked is under consideration.

Diversity & Inclusion is a cornerstone of sustaining the strength of international growth by fostering an inclusive culture that leverages diversity as a competitive advantage. MOL Group promotes a culture of diversity, creating an environment that allows a global workforce of diverse backgrounds, experiences and perspectives to contribute to collaboratively achieving results without boundaries. MOL Group fosters equal opportunities for all employees and job applicants, irrespective of race, colour, religion, gender, national origin or age. This also enshrined in the Group's Code of Ethics and Business Conduct.

<https://molgroupcareers.info/en/working-at-mol-group/our-employees/diversity-and-inclusion>

<https://molgroup.info/en/working-at-mol-group/our-employees/diversity-and-inclusion/commitments-to-gender-diversity>

MOL Group companies apply and enforce the principle of equal treatment, committed to diversity and equal opportunities at work and promote equal opportunity regarding all its employees. To this effect MOL Plc. prepared equal opportunity plan, and established Equal Opportunity Committee. The purpose of the plan is to define the general principles, requirements, and practices in order to provide equal opportunity.

MOL Group exposure to the risk of incidents of child labour is relatively minor given that most of the Group's activities are performed in European countries. Nevertheless, MOL Group is committed to lawful and fair employment and to respecting labour principles. MOL Group also expects the same from business partners and external stakeholders. MOL Group will not tolerate any form of forced, compulsory, bonded or child labour or any other kind of unethical employment practice such as withholding wages, denying sick leave or daily rest, abuse of alternative employment forms or evasion of health care contributions. We ensure that these forms of labour and slavery, servitude, and human trafficking do not take place within our business and supply chains.

This is included in both the Group's Code of Ethics and Business Conduct or CoEBC (*IV.2. Human Rights - IV.2.5.Fair Labour Practices*), and rolled out along the supply chain through the MOL Business Partner Code of Ethics or BPCE (*Point 2: Human rights*).

AUDIT AND ASSESSMENT OF SECURITY CONTRACTORS: MOL Group performs two types of audits for its security forces: 1) a self "daily - monthly evaluation" performed by the Service Provider. It is under the responsibility of Service Provider to evaluate every security guard on duty on the given day by using the "Daily - Monthly Evaluation sheet", which is subsequently sent to the MOL Group Regional Security Manager for evaluation, applying a three rating system is used to evaluate performance of security guards. 2) On top of the self-evaluation, a "Monthly Evaluation" assessing the work of security forces is performed by the MOL Region Security Leader, as well as "a "Monthly Fluctuation" report by the Region Security Leader. Finally, a "Summarize Valuation" to the Country Manager is performed by Region Security Leaders.

MOL Group is a mid-sized oil and gas company, with the majority of operations concentrated in and around Central Europe (GRI 102-4). MOL Group CEE operations or its International Upstream operations are neither located in or are adjacent to indigenous peoples' communities. As a result, MOL Group is not engaged in activities which may either affect indigenous people or incur into violations involving the rights of indigenous people.

MOL Group understanding of indigenous people is aligned with the UN definition: http://www.un.org/esa/socdev/unpfii/documents/5session_factsheet1.pdf

Additionally, MOL Group considers as indigenous people communities those who are limited in exercising their rights to protect their land against investors. In MOL Group's view, communities in the EU have such rights. MOL Group's assessment did not identify such communities in Pakistan, Kurdistan or Kazakhstan.

MOL HSE Management System includes section XVI. Social Impacts: *Plan for management and mitigation of risks: At least the following negative impacts must be assessed and managed: including, a) impact on health, safety and general living conditions of the local communities – any disproportionate negative impact must be avoided; b) resettlement of local communities – involuntary resettlement (physical and economic) must be avoided in all reasonable cases; c) impact on indigenous people – prior and informed consent of such groups must be gained; d. Impact on cultural heritages, traditional landscapes.*

https://molgroup.info/en/show/sustainability/hse_management_system_2018.pdf

Furthermore MOL Group Code of Ethics and Business Conduct also provides for the protection of indigenous people affected by MOL Group operations, under section IV.2. Human rights (*We assure the respect of human rights by assessing the impact of our actions. We place a special focus on our workers, suppliers and local communities as well as on vulnerable groups of indigenous people, women, national or ethnic, religious and linguistic minorities, children, persons with disabilities and migrant workers and their families. We ensure the safeguarding of the rights of tribal populations and indigenous people affected by our operations including refraining from forced relocation. We place a particular focus on the security service providers who act on behalf of MOL Group, in order to prevent any human rights violations during the performance of their activities.*

MOL Group respects the Universal Declaration of Human Rights which summarizes fundamental human rights in 30 articles (United Nations General Assembly 1948) and further guidance documents on human rights such as the UN Global Compact (2000), the UN Guiding Principles ('Ruggie Framework') (2011), the OECD Guidelines for Multinational Enterprises (2011) and voluntary principles about security and human rights. MOL Group strives to implement them into our every day business operations:

<https://molgroup.info/en/sustainability/ethics-and-governance>

MOL Group exposure to the risk of human right of violation is relatively minor given that most of the Group's activities are performed in European countries. Nevertheless, MOL Group is committed to respecting fundamental human rights, a principle which is also included in the Group's Code of Ethics and Business Conduct, and which is rolled out along the supply chain through the MOL Business Partner Code of Ethics (links below).

https://molgroup.info/storage/documents/sustainability/mol_group_code_of_ethics.pdf

https://molgroup.info/storage/documents/sustainability/business_partner_code_of_ethics/business_partner_code_of_ethics_2017_english.pdf

Despite the low risk, since 2015, Human Rights Watch and Freedom House country evaluations have been taken into account in risk assessments as external benchmarks for all (100%) operations. Based on these, the riskiest countries for MOL Group operated and non-operated assets from a human-rights perspective are Angola, Cameroon, Egypt Iraq, Kazakhstan, Oman, Pakistan, Russia and the Ukraine. MOL Group risk assessments include human right assessments. A total of 53 MOL Group operational companies and INA d.d. with consolidated subsidiaries scope in 22 countries have been subject to an internal human-rights risk assessment.

PARTIAL REPORTING EXPLANATION: Country breakdown for the 53 sites is not disclosed. Disclosure of this indicator is under consideration.

Due to its scale and footprint, MOL Group operations may affect communities. This effect on communities can both be positive (providing work and wages, paying taxes, investing in the community etc.) and negative (emissions, environmental impact, human rights violations, unethical behaviour, unsafe work etc.). The oil and gas industry is under particular scrutiny as operations may pose potential health, safety and environmental risks. Consequently, MOL Group faces the challenging and – if done appropriately – rewarding task of obtaining a "license to operate" in the communities where it operates. MOL Group established a Community Engagement Group Principle (link below) that allows for identification, anticipation and, where possible, control of the effects of stakeholder actions and reactions. A pilot project for the Community Engagement Group Principle took place in 2018 (additional information can be obtained in the 2018 Annual Report). The Group Principle was applied in MOL Petrochemicals site in Tiszaújváros (Hungary) in 2018. Based on the evaluation, the programme was extended to the Danube Refinery during 2019 (additional information can be obtained in the 2019 Annual Report – link below). Extension of the scope is under reconciliation.

PARTIAL REPORTING EXPLANATION: Percentage of operations with local community engagement not disclosed as prescribed by the GRI Standards as this is not yet applicable.

<https://molgroup.info/en/sustainability/communities> / <https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

Number of operated Upstream production assets is 340 (defined as an individual license where production is currently ongoing), while the number of development projects in 2019 was 58 (applying a threshold of USD 0.3 mn CAPEX). All development projects/production assets are under community consultation involving at any point in time one or more of the following affected communities: individuals, businesses, communities, local government authorities, local non-governmental and other institutions, local government officials, community leaders and civil society organizations.

Example: MOL Pakistan, operates through a comprehensive community management approach with a community development function that is responsible for timely engagement with local communities in areas of impacted by operations. MOL Pakistan has a Community Relations Officer (CRO) function that engages with the local impacted community in advance. The CRO is available 24/7 in the operational area. In case of any violation, the CRO reports the incidence to the company and meets with local communities to discuss and resolve the issue in due time. CROs are all hired locally, and belong to the same communities. Before moving in, a socio-economic profile of the area is compiled, including a social impact assessment. During the course of engagement, focus group discussions are held with the communities, wherein the first dialogue is held with the elders of the area (as per local custom), including influential stakeholders. These discussions are followed by "awareness raising sessions", highlighting local issues and potential impact, with possible redressal measures proposed, including development plans for the area concerned. Prior start, all operations are cleared by the relevant government and regulatory authorities. All possible social and environmental impacts are pre-assessed by the relevant regulatory authorities, including Environmental Impact Assessments and open, public sessions with the relevant/associated communities

ENVIRONMENTAL IMPACT ASSESSMENT (EIA): all HSE relevant project proposals (IPPs – Investment Project Proposal) have an HSE chapter where all aspects of project are elaborated (what are the benefits for environment by project implementation). Also, after project implementation, an Post Evaluation Report is prepared where project are evaluated (goals are achieved or not). For Upstream sites, an agroecological studies are prepared in order to check the environmental status before and after drilling/exploration & production/operational activities. In line with legal obligations (legal framework in Croatia), if project can have impact on environment, an Environmental Elaborate or Environmental Impact Assessment Study has to be prepared (depends on the type and scope of project) by authorized company and approved by the Environmental Authority. During this approval process, a study summary is available to public for commenting. Recommendations are implemented, followed up, reported and inspected by the environmental inspection.

MOL Group's Social Engagement Group Practice sets the criteria, steps and methodologies to follow in establishing a relationship with the communities based on the Principles of Engagement in harmony with AA1000 Stakeholder Engagement Standard 2011. In case of major projects affecting a wider society in the place of operation a Social Investment (SI) programme design should be carried out. The SI programme planning occurs simultaneously with the business project design itself. Based on the methodology defined in The Social Engagement Group Practice, before decision on an investment or abandonment project proposal sites/operations shall carry out a Social Impact Assessment (SIA) to identify basic information and ideas about wider societal issues. A context study should also include an analysis of existing local opportunities to improve the Company's effectiveness or strategy execution. These could include: available human resources, government capacity, physical infrastructure (e.g. waste management, town planning, etc.), and local supplier/contractor capabilities

Social Investment priorities shall be aligned with the oil and gas project development timeline to provide the biggest contribution to the Company in each particular phase of the project cycle. Engagement of local community members' (individuals, opinion leaders, non-profit organizations, municipalities, associations etc.) towards the Company must constantly be ensured during operational activities that has effect on the local communities. The engagement process supports the achievement of MOL Group's business success and strategic objectives by establishing high quality partnerships through: identification of stakeholders, resolving issues of stakeholders (through interaction, consensus-based decisions, collaborative solutions etc). In all projects, operations, and also in the event of site abandonments which has significant social impact on the local community the process must be carried out at the earliest phase possible. MOL Group works together with public authorities and social organizations to identify the expectations, needs and aspirations of the communities surrounding our facilities. The lines of action of MOL Group in terms of social commitment are intended to respond to the needs identified in communities, and are based on the criteria of giving the community the capacity to develop itself. MOL Group uses the London Benchmarking Group (LBG) methodology.

MOL Group provides data on the number of grievances (incl. environmental grievances) in the Data Library. Furthermore, MOL Group provides a yearly update on the operations with significant negative impacts on local communities in its Annual Report. Both can be obtained in the following link:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

MOL Group operations are neither located in or are adjacent to indigenous people. As a result, MOL Group does not operate sites where indigenous communities are present and therefore affected by MOL Group activities. Consequently, no disputes with indigenous people are currently registered.

Due to its scale and footprint, MOL Group operations may have impacts that result in disputes with local communities. These are often raised through grievance mechanisms. As an element of community engagement, MOL Group also focuses on managing grievances. MOL Group considers each grievance notification from a community to be significant. To receive and manage grievances from both internal and external stakeholders, an online grievance management system is operated through which anybody can submit an ethical notification. MOL Group Compliance & Ethics department operates a corporate grievance mechanism under the coordination of the Group Ethics Officer and according to the Ethics Council Rules of procedure whereas questions are answered, complaints are investigated and the Ethics Council assesses the raised issues. Description of the Ethics Grievance Channel, and the MOL Group "Speak-Up" whistleblower system can be obtained via the links below:

<https://molgroup.info/en/sustainability/ethics-and-governance>

<https://molgroup.info/en/about-mol-group/speak-up>

MOL Group discloses the number of grievances and outcome per location. Furthermore, MOL Group provides supporting description concerning significant disputes with local communities (including environmental and land related) and the outcome in its Annual Report. Both can be obtained through the following link:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

Description of a dispute: MOL Pakistan operates in the province of Khyber Pakhtunkhwa in Pakistan, but its operations are not close or adjacent to local communities. However, a number of communities are situated close to the Central Processing Facility (CPF) and the Gas Processing Facility (GPF). As a result, disputes arise from time to time, and can cover the following range of subjects, including, but not limited to a) use of forest land for oil & gas E&P purposes, b) land ownership disputes between co-owners, c) lease issues, mortgage, confiscated & communal land in nature, d) community dispute between two villages on boundary demarcation of each village, e) court cases on ownership & errors in government records etc.

For MOL Pakistan any major action against the company that stops its work from continuing or its operations being affected is considered a form of a significant dispute. During 2019, no disputes were registered that would have a significant effect to the continuous business operations.

MOL Group introduced a new group-level, integrated web-based solution that deals with all supplier-related information, from the pre-screening through pre-qualification to the contracting stage. The system is called eSourcing (link below). This system includes automated assessment of risks associated with suppliers based on legal, ethical, financial, health and safety, as well as environmentally related data and documentation. It also facilitates the supplier pre-qualification process.

<https://mol.esourcing.molgroup.info/fw/homepages/registration/><https://molgroup.info/hu/online-bidding-registration>SUPPLIER REGISTRATION – LIST OF QUESTIONS (11 LANGUAGES): <https://mol.hu/en/about-mol/supplier-center/supplier-database-and-e-bidding-system/>

It is obligatory for all new suppliers to be screened using a number of social criteria (defined as ethical, health and safety). As a result, all new suppliers (100%) were screened using social criteria during 2019. Furthermore, all new suppliers must sign and act according to both the Code of Ethics and Business Conduct as well as Business Partner Code Of Ethics. Supporting narrative under the Ethics chapter of the Annual Report regarding ethics coverage in supplier contracts:

MOL Groups asks its suppliers to get acquainted with MOL Group's ethical standards, follow these requirements all times, and extend them to their own supply chain. We expect partners to immediately inform MOL Group on a breach of the Code of Ethics and Business Conduct and the implementation of corrective actions regarding any activity performed in connection with MOL Group operations. In the course of operation of our partners (i.e. by own employee conduct or by their suppliers or sub-contractors, intermediaries, proxies or agents), MOL Group reserves the right to apply corrective measures up to and including termination of business co-operation in accordance with the applicable law. Such breaches can be determined in accordance with the principles stated in the MOL Group Ethics Council Rules of Procedure (Appendix of the MOL Group Code of Ethics and Business Conduct - link below) by MOL Group Ethics Council. If non-compliance or breach emerge, MOL Group partners shall co-operate in clarification. As part of this co-operation MOL Group companies participating in the clarification may ask for verification and if there is a reason for concern, for corrective measures by the following means: a) Self-Assessment: e.g. fill in a questionnaire, conduct internal investigation or solicit information from a third party, e.g. a data provider or public information on compliance; b) certifications/statements: e.g. certification or statement confirming compliance) Pre-Qualification Audits: MOL Group or a third party acting on MOL Group's behalf may contact business partners and ask for permission to verify compliance on their site. MOL Group also regularly performing On-Site audits to verify compliance to MOL standards during suppliers activities on our area of operation. Additional information on MOL Group's supply chain can be obtained via the below link: <https://molgroup.info/en/sustainability/ethics-and-governance>

https://molgroup.info/storage/documents/sustainability/mol_group_code_of_ethics.pdf

MOL Group is continuously assessing substances that are used by consumers which may have harmful effects on human health or the environment (substances classified as carcinogenic, mutagenic and reproductive toxic – CMR; persistent, bio-accumulative and toxic – PBT; or very persistent or very bio-accumulative – vPvB) or have physical hazards (Flammability, Explosiveness, etc.) within the frame of Registration, Evaluation, Authorization and Restriction of Chemicals (REACH) Regulation. Declarations of compliance with REACH, as well as the relevant safety data sheets, are available on the following websites:

- MOL Hungary: <http://reach.mol.hu>
- MOL Hungary: <https://mol.hu/en/polymers/certificates>
- MOL-LUB: www.mol.hu/hu/kenoanyag-es-autoapolas
- Slovnaft: www.slovnaft.sk/en/products/material-safety-data-sheets
- INA: www.ina.hr/customers/products-and-services/safe-management-of-product/safety-datasheets-10027/10027
- INA MAZIVA: <http://www.ina-maziva.hr/en/support/safety-data-sheets/117>
- IES: www.molgroupitaly.it/it/prodotti-e-servizi/prodotti-petrolieri/benzine-e-gasoli

MOL Group is continuously updating the REACH dossiers. The submitted and updated information will inform customers about the product and their impact on human health and the environment via safety data sheets. MOL Group is committed to follow the updates of the Candidate List of Substances of Very High Concern, and based on actual knowledge, the products manufactured in MOL Group Refineries do not contain (no intentional blending) any of the 201 substances listed on the Candidate List.

PARTIAL REPORTING EXPLANATION: Products are continuously assessed for improvement as dossiers are revised as data is collected. Changes typically take place following legal requirements or because the European Chemical Agency requests it. However MOL Group does not disclose the percentage of significant product/service categories for which health and safety impacts are assessed for improvement as prescribed by the GRI Standards.

Given the integrated nature of MOL Group, it is subject to a number of requirements for its product and service information, and labelling within petrochemicals and lubricants (Downstream), fuel and non-fuel products (Consumer Services). All products are covered by and assessed for compliance.

REFINING AND PETROCHEMICALS: MOL Group provides transparent information about the HSE impacts of products by giving the SDS (safety data sheet). MOL Group prepares Safety Data Sheets not only for products classified as hazardous, which is mandatory according to 1907/2006/EC (REACH) Regulation, but for the not classified products as well. Although polymers are not classified as hazardous, SDS complies with the current Regulations as well. All of our products are classified according to CLP (Classification, Labelling and Packaging) Regulation, which is a European Union regulation aligning EU system of classification, labelling and packaging of chemical substances and mixtures to the Globally Harmonized System (GHS). SDS includes information on the safe use of a product, the disposal of the product, or the sourcing of its components. MOL Group immediately updates its manufacturer's statement as soon as the SVHC (Substances of Very High Concern) list changes. Access to this information helps customers to make informed purchasing choices.

Link : <https://www.molgroupchemicals.com/articles/1/catalogues-certificates>

LUBRICANTS: Front labels of MOL Group lubricants and auto chemicals contain brand name, product category, benefit and hint for application. Back labels contain all other information according to legal requirements. MOL Group Lubricant prepares its back labels taking into account current regulatory requirements. The back label elements are identical as those written under the MSDS. The back label includes product name, use, dangerous elements, shelf life, production time, batch number and hazard pictogram, if applicable EUH, H, P phrases. These phrases refer to dangers in relation to the use of the product, describing precautionary measures in case of accident ("H" "hazard statement" or "P" for "precautionary statement"). MOL Group Lubricants has presence in nearly 50 countries around the world. Obligatory texts can be written in ~24 languages. If a country has particular regulations MOL Groups completes the text with special requirements.

Link: <https://mol.hu/en/for-the-business/chemicals/base-oils/>

FUEL: Fuel labelling is regulated by the European law. Four elements must to appear on the fuel stickers: fuel octane, fuel type, quality description, ID sign, as brand name is optional. MOL Group is in compliance with all EU legislation on fuel product and service information and labelling

NON-FUEL: As a result of the 2030 strategy and the introduction of the Fresh Corner concept at service stations, MOL Group places increasing emphasis on information and labelling for own-products. MOL Group is in compliance with EU as well with local legislation on the matter.

Given the integrated nature of MOL Group's oil & gas operations, MOL Group is subject to a number of Requirements for product and service information and labelling within petrochemicals and lubricants (Downstream), as well as fuel and non-fuel products (Consumer Services). MOL Group tracks any incident of non-compliance concerning product and service information and labelling. Below an overview of all four areas:

REFINING AND PETROCHEMICALS: No incidents of non-compliance concerning product and service information and labelling were recorded during 2019.

LUBRICANTS: No incidents of non-compliance concerning product and service information and labelling were recorded during 2019

FUEL: No incidents of non-compliance concerning product and service information and labelling were registered during 2019

NON-FUEL: During 2019, there was one non-fuel incident of non-compliance concerning product and service information and labelling. Labelling error was corrected, no fine or penalty was handed out.

In order to avoid misleading advertising, MOL Group thoroughly examines the intelligibility of the messages it seeks to convey. Most commonly, this means doing research with focus groups, where participants are able to express their opinions and insights about particular messages and visuals. MOL Group uses this method at the early and mid-phases of developing advertisements so as to obtain continuous feedback about how understandable and clear the messages MOL Group wants to communicate are. In addition, all communication materials are checked by the Legal department - both at the Group level and locally in countries where MOL Group operates - before they are released to the public. This process promotes more responsible advertising.

No incidents of non-compliance with regulations and/or voluntary codes concerning marketing communications were recorded during 2019, including:

- i) no incidents of non-compliance with regulations resulting in a fine or penalty were registered;
- ii) no incidents of non-compliance with regulations resulting in a warning were registered;
- iii) no incidents of non-compliance with voluntary codes were registered.

One open process regarding a promotion is with the Hungarian Competition Authority, but no penalties incurred.

Protection of personal data is of key importance for MOL Group. MOL Group companies are responsible for ensuring compliance with all applicable data protection requirements when processing personal data. MOL Group is committed to conducting its business in accordance with all applicable data protection laws and regulations especially with the GDPR and in line with the highest standards of ethical conduct.

During 2019, MOL Group registered 2 substantiated complaint concerning breach of customer privacy (one in MOL Plc. and one in INA d.d). The breach in MOL Plc. did not pose risk to the rights and freedoms of the customer based on the internal risk assessment, therefore no further action was taken but the breach was registered. In case of the breach in INA d.d., the Company made the necessary action requested by the local data protection authority. No further consequences occurred. MOL Group did not register any case concerning leaks, theft or loss of customer data concerning the year 2019.

Information regarding 2019 focus and results (incl. especial emphasis on GDPR), can be obtained at the Annual Report:

Group Internal Audit & Compliance organization (including Ethics) and its local teams have a constantly adjusted scope to the changing regulatory and business environment (Group Compliance Program), which focuses on those compliance risks which require engagement on corporate level, e.g. competition law, consumer protection, anti-corruption, personal data protection rules and international trade restrictions and to prevent insider trading and anti-money laundering. These areas bring very high potential consequences (fines, reputation risk etc.). Group Compliance Program is operated for minimizing compliance exposure by conducting compliance investigations and performing trainings to increase awareness. Compliance activity has the following features which are essential to implement MOL Group's Compliance Program successfully:

- Independent: Internal Audit & Compliance has its own organization, experts and budget in MOL Group
- Credible: in-house enforcement of internal and external commitments by making investigations
- Authorized: all employees of MOL Group are obliged to support the operation of Compliance Program and activities of compliance teams
- Group-level quality assurance: regularly analyses and develops efficiency of group-level compliance risk management and business compliance control processes in order to mitigate risks
- Reporting: Internal Audit & Compliance operates whistle-blower system and directly reports to Supervisory Board
- Awareness-oriented: trainings aim at increasing level of conscious behavior around the whole Group.

Additional information can be obtained through the following link:

<https://molgroup.info/en/sustainability/ethics-and-governance>

During 2019, MOL Group registered HUF 10.8 million of HSE related penalties. Furthermore, MOL Group discloses litigation related information inside the Annual Report under "Outcome of Certain Litigations", "Legal Provisions", and "Authority Procedures, Litigation". Additional information can be obtained in the link below:

ANNUAL REPORT PAGE

N/A

EM-EP-210a.3

10

11

TCFD

According to policy MOL Group avoids involuntary resettlement to the extent feasible, or to minimize and mitigate its adverse social and economic impacts. Where avoidance is not feasible, the key objective is to assist displaced households in their efforts to improve or at least restore their incomes and standards of living following displacement. The policy also covers direct economic and social impacts caused by a) the involuntary taking of land resulting in relocation or loss of shelter, loss of assets or access to assets; or loss of income sources or means of livelihood, whether or not the affected persons must move to another location; and (b) the involuntary restriction of access to legally designated parks and protected areas resulting in adverse impacts on the livelihoods of the displaced persons.

Development projects must seek to avoid involuntary resettlement. However, if an activity entails involuntary resettlement of households, the project must follow resettlement policy requirements. The actions to be taken to process the resettlement component of projects fall into three categories:

I. **Preparing the resettlement component:** Surveys of the project area to obtain census and socioeconomic data; Finalizing resettlement entitlements; Identifying resettlement sites and programs; Coordinate organizations / agencies to deliver resettlement assistance; and Devising budgets and plans for implementing and monitoring the resettlement activity.

II. **Preparing the resettlement planning documents:** coordinate with all agencies involved to develop the required planning document; determine the type of resettlement planning documents required; have resettlement plans agreed with affecting communities; and have plans reviewed and approved by relevant organisation/agencies

III. **Developing systems for supervising and monitoring implementation:** take steps to ensure that implementation arrangements are adequate; and arrange for internal and external resettlement monitoring during implementation.

No displacements were made during 2019.

The main goal of process safety management (PSM) is to establish and operate an efficient system which ensures the prevention of technology-related process incidents (leakages, fires, explosions, etc.) and protects people, assets and environment against harm. Implementation of a process safety management in MOL Group started back in 2006. MOL Group's PSM-related goal is to continuously decrease the number and severity of process incidents and be in the top 25 percentile of CONCAWE and IOGP benchmarks. MOL Group PSM requirements are incorporated in the highest level document – HSE Management System and relevant businesses are required to comply with these requirements.

https://molgroup.info/en/show/sustainability/hse_management_system_2018.pdf

Number of process safety events and supportive narrative explaining the main causes can be obtained at the Data Library and the Annual Report:

<https://molgroup.info/en/investor-relations/publications#nav-annual-reports>

Furthermore, MOL Group provides PSE related figures (including supporting explanations) on a quarterly basis through its Quarterly Earnings Reports, under the section *STAINABLE DEVELOPMENT & HSE HIGHLIGHTS*. Quarterly capital markets communication materials can be obtained through the following link:

<https://molgroup.info/en/investor-relations/publications#nav-quarterly-reports>

Number of Tier 1 Process Safety Events Number per million hours worked was: 0.15 (FY 2015), 0.31 (FY 2016), 0.17 (FY 2017), 0.21 (FY 2018) and 0.13 (FY 2019)

NEW DISCLOSURE: As of 2019, MOL Group provides disclosure of a number of new metrics in the group-wide Data Library. The new metrics below. Link and name of indicator as the bottom of the page.

- TIER 1 Process Safety Events broken down by Downstream into Downstream Production (Refining and Petrochemicals) and Logistics, as well as Consumer Services
- TIER 2 Process Safety Events broken down by Downstream into Downstream Production (Refining and Petrochemicals) and Logistics, as well as Consumer Services

TCFD

TO BE READ AND UNDERSTOOD IN CONNECTION WITH 305-3 "OTHER INDIRECT (SCOPE 3) GHG EMISSIONS"

MOL Group have not produced biofuels in 2019. However, two MOL Group companies (MOL Plc. and Slovnaft) have minority shares in joint ventures that are involved in the production of biodiesel. These companies (Rossi Biofuel and Meroco) operate independently from MOL Group and are considered financial investments.

In 2019, MOL Plc. and Slovnaft purchased 450 million litres of bio-components for the purpose of blending it into petrol and diesel products. MOL Group uses both conventional and waste-based biofuels only from sustainable sources. These are produced from certified renewable sources and from waste feedstock, including used cooking oil which is collected through the service station network of MOL Group.

The bio-components purchased in 2019 comply with the requirements of the EU Renewable Energy Directive. MOL Group companies (MOL Plc., Slovnaft and INA) comply with the European ISCC (International Sustainability and Carbon Certification System) as distributors. ISCC certifies the entire supply chain of bio-based feedstocks and renewables to ensure the application of strict ecological and social sustainability standards, greenhouse gas emissions savings and traceability throughout the supply chain.

More information can be obtained through the following links:

<https://molgroup.info/en/sustainability/climate-change>

GRI REPORTING TABLE: CHANGES POST FIRST PUBLICATION

- ▶ From time to time, MOL Group receives investor requests for additional information, and/or is subject to external rating agencies that require new information to be disclosed. As a result, MOL Group continually updates its GRI Reporting Table to reflect the need for more transparency from capital market participants. As a result, information may be added following the publication of the GRI Reporting Table which was published on 16 April 2020 (subject to external assurance). Any information added after the 16th of April 2020 (below) has not been subject to external audit.
- ▶ The list of additions after the initial publication of the GRI Reporting Table on the 11th of April 2020 can be viewed below:

	STANDARD TITLE	CODE	DISCLOSURE TITLE	CHANGES INTRODUCED	SLIDE	DATE MODIFIED
GRI 410	Security Practices	410-1	Security personnel trained in human rights policies or procedures	Additional information on Audit and Assessment of Security Contractors	153	26/7/2020
GRI 413	Local Communities	413-1	Operations with local community engagement, impact assessments, and development programs	Additional information on Environmental Impact Assessments (EIA)	159	26/7/2020

GRI REPORTING TABLE: **DISCLAIMER**

Certain information set forth in this presentation contains "forward-looking information". All statements, other than statements of historical fact, are forward-looking statements. Such forward-looking statements necessarily involve known and unknown risks and uncertainties, which may cause actual performance and financial results in future periods to differ materially from any projections of future performance or result expressed or implied by such forward-looking statements. As a result, these statements are not guarantees of future performance and undue reliance should not be placed on them.

The information in this presentation, in accordance with the Global Reporting Initiative (GRI) framework, is shared based on the best available data at the date of publication. In some cases where measurement results were not available the data disclosed is based on estimation. While the information is considered to be true and correct at the date of publication, changes in circumstances after the time of publication may impact on the accuracy of the information. The information may change without notice. In some cases, the data related to the indicators presented in this report does not form part of the document itself. In such cases the data can be found either in the annual report or in the data library of MOL group. These reports altogether form the sustainability reporting of MOL group and must be read together for complete understanding of sustainability performance.
